

277/278 Series Parts List

Enclosed with this bulletin is a new parts list book for the 277/278 Series P.T.O. (HY25-2277-M1/US) dated February 15, 2002. One new part number to the 277 Series is the shifter cover gasket 22-P-112. This gasket is used with both the 277 and the 278 Series P.T.O.

As announced in bulletin PTO-PNI-129 dated September 30, 2001, the new 278 Series comes in six speed ratios "B", "D", "G", "M", "S" and "T" ratios. These ratios are available with both "Standard" and "SuperTorque" input gears. The 278 will give you more clearance between the pump and transmission case and in some applications between the frame rails and the P.T.O. because of the unique "3" arrangement that allows for a gear forward, shaft to the rear and "bulge" straight up on both sides of the transmission. Dimensions for the 278 housing can be found on page 15 of the parts list.
