

LIQUIfit & TrueSeal

Beverage Dispensing Equipment

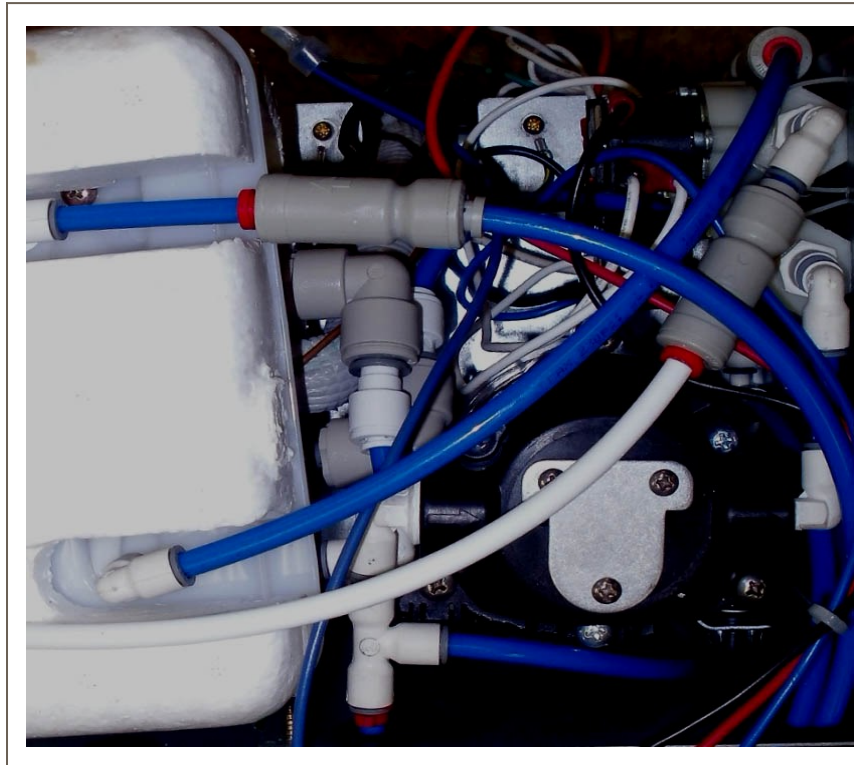

Situation

A water carbonation equipment manufacturer was developing a new product line for the European restaurant market. This new machine filters, chills and carbonates water within a compact machine envelope. The compact nature of the appliance required an equally compact fluid handling solution.

Solution

The small profile of the (32) LIQUIfit fittings allowed for optimal routings and reduced installation time. The customer was also able to consolidate suppliers by utilizing TrueSeal check valves from Parker Fluid System Connectors Division and a pressure regulator from Parker Fluid Control Division.

Benefits

- Reduced quantity of components
- Reduced connection envelope size
- Reduced total product cost
- Reduced product weight

Success Factors

- Parker's wide range of products
- Engineering focus to develop innovative solutions
- Local field sales support to coordinate with customer

ENGINEERING YOUR SUCCESS.
