

LIQUIfit

Water Purification Equipment

Situation

Southeastern Filtration and Equipment Systems was developing a manifold system for water filters. The system provides flexibility to easily customize the treatment process to meet their customers' individual needs. To achieve this flexibility, a low profile connection on the filter head and easy assembly of the manifold was necessary.

Solution

Parker worked with the filter head supplier to have the LIQUIfit cartridges qualified & incorporated into the filter head design. The customer gained a low profile connection that reduced the overall product envelope and decreased the time needed to assemble.

Contact Information

Parker Hannifin Corporation
Fluid System Connectors Division

Benefits

- Reduced connection envelope size
- Reduced installation time
- Reduced total product cost

Success Factors

- Engineering focus to develop innovative solutions
- Local field sales support to coordinate with customer
- Flexibility & coordination with customer's supplier

ENGINEERING YOUR SUCCESS.
