

**CHELSEA®**

## 242 & 244 SERIES EOC UPDATE

**PTO-TEC-97**

**TECHNICAL**

**DATE:** July 15, 1999

**TO:** All Chelsea® Power Take-Off Customers

As the popularity of the 242 & 244 Series for the Ford 4R100 automatic transmission grows, we are getting requests about using Chelsea's Electronic Overspeed Control.

In order for us to provide a signal to the Ford Powertrain Control Module circuit, we have had to incorporate an additional wire to our E.O.C. module. This new wire is light blue with a yellow stripe, it will connect to the Ford wire number 322, labeled Power Take-Off and is also light blue with a yellow stripe.

Part number for the new control box that will be included with the 242 & 244 Series is 329255-12X

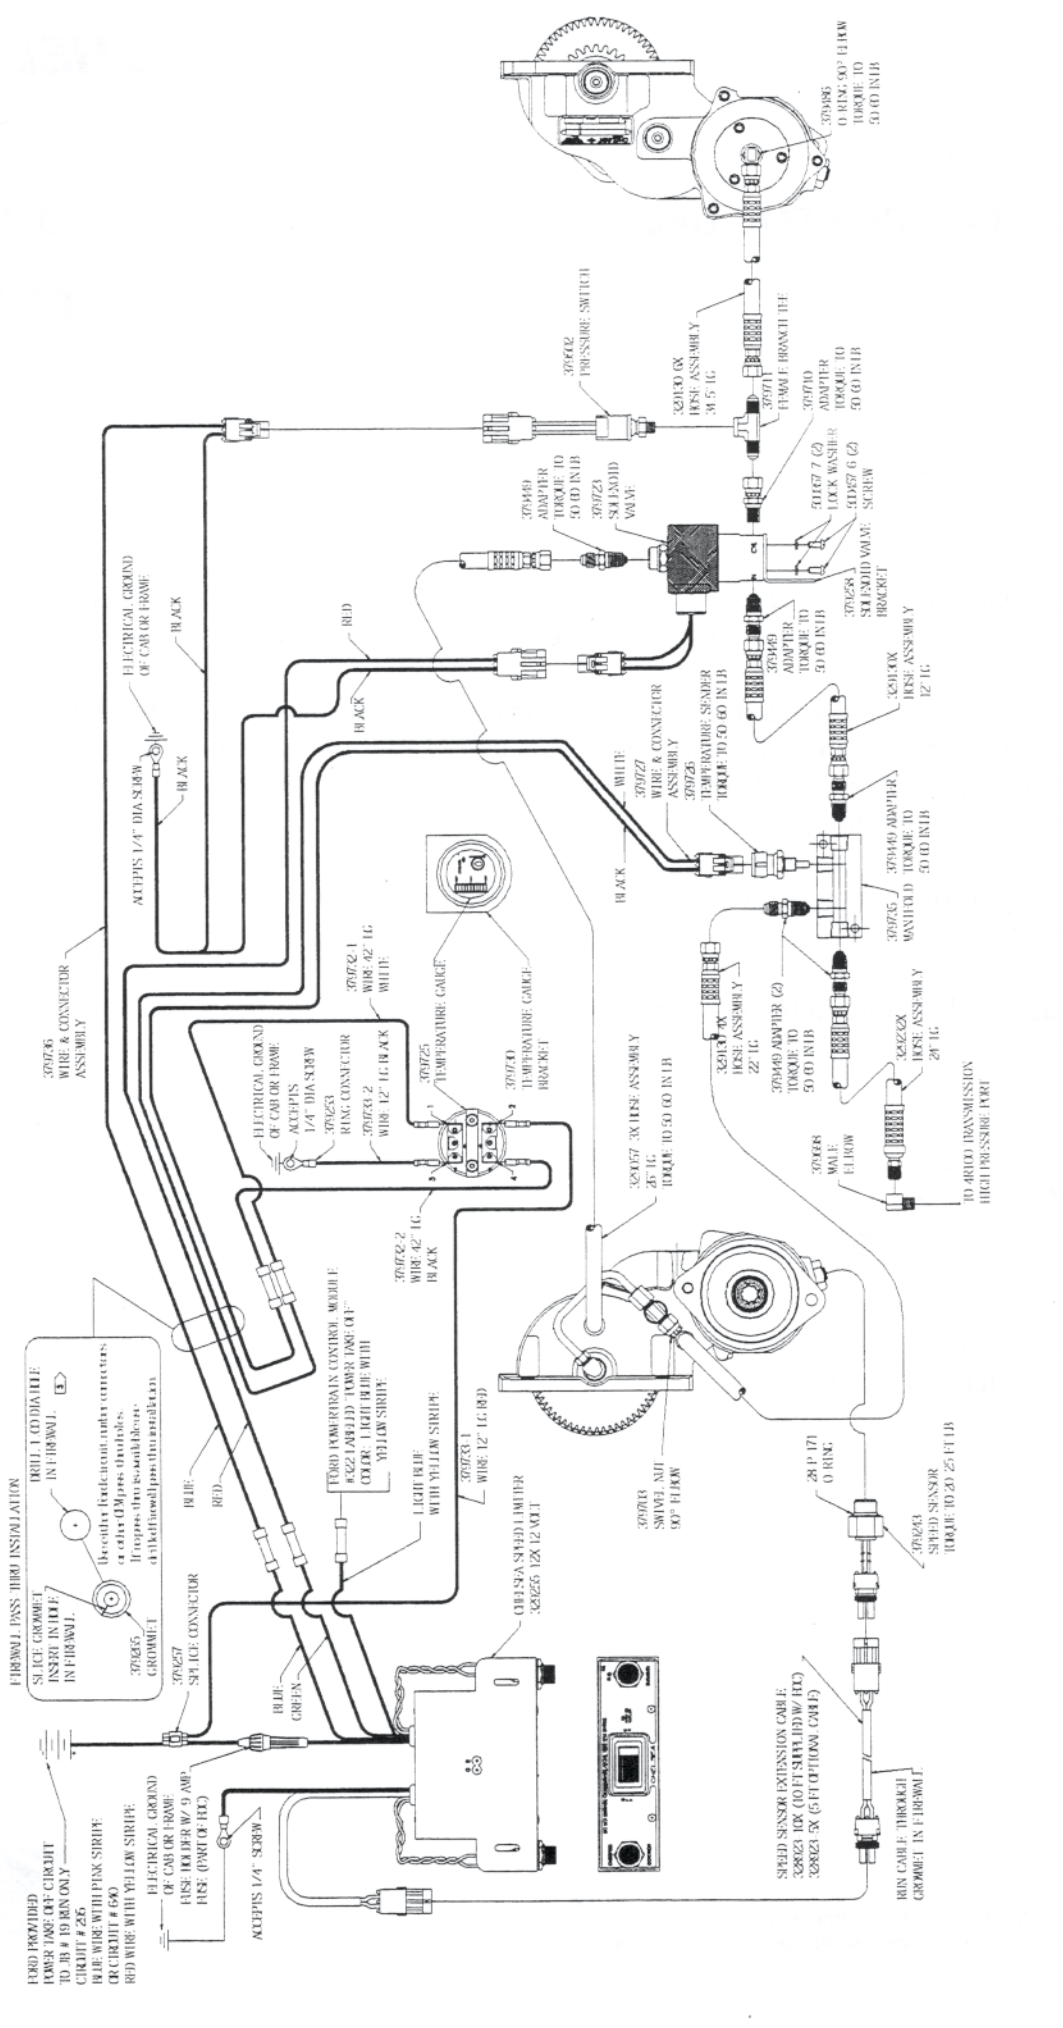

On the back of this bulletin is the plumbing and wiring diagram for the Electronic Overspeed Control.
