File Under: Technical/Service

BULLETIN BULLETIN BULLETIN BULLETIN BULLETIN

Date: June 29, 1994

To: All Chelsea Power Take-Off Customers

Subject: Safety Decals, Owners Manuals and Controls

As a Chelsea customer you play an important role in providing value and safety to all Chelsea Power Take-Off users.

Occasionally, customers may substitute control units of another manufacturer in place of genuine Chelsea controls, or safety information enclosed with the P.T.O. may not be supplied with the truck. If either or both of these cases are true, please remember the following two key points as you make your sale or install the P.T.O.

1. SAFETY INFORMATION AND WARNING LABELS MUST BE USED AS INSTRUCTED.

Chelsea supplies safety information in our owners manuals and in the form of safety decals, that are provided without cost with each Power Take-Off we ship. This includes important information on P.T.O. installation and safe operation. Safety decals are provided that are intended for installation on each vehicle or application. The decals should be placed on the side rails or body in plain view. These decals are to warn persons nearby of the hazards of being near the rotating or moving machinery. It is vitally important that this information be in place according to our recommendations for the protection of your customer and others.

2. ONLY GENUINE CHELSEA COMPONENTS SHOULD BE USED WITH CHELSEA POWER TAKE-OFFS.

Genuine Chelsea control units are specially engineered for compatibility with our P.T.O.'s. Our rigorous quality and testing procedures insure the rugged dependability and quality that you have come to associate with genuine Chelsea products. Our control units include special safety features to protect end users of the equipment. The size, shape, and color of the Chelsea control unit aides in its easy recognition and clearly indicates the P.T.O.'s engagement status. An interlock on our air shift controls and recessed switch of our electric and electronic controls prevent unintentional movement. The indicator light featured on all our Power Take-Offs alerts the operator to the P.T.O. engagement status. These are important features that a substitute control unit may not have!

Chelsea does not approve of any use of its Power Take-Offs which omits any Chelsea supplied safety features, information or decals. We respectfully urge you to include our manual, decals, and controls with the vehicle.

Thank you for your time in considering the above. We sincerely appreciate your purchases of our products. The safety of your customers and your long term success is important to us.

A handwritten signature in black ink that reads "Jeff King".
