

IQAN-MC4 Master Controller Family

Electronic Control Systems

ENGINEERING YOUR SUCCESS.

IQAN-MC4

Efficiency in focus – throughout the entire machine life cycle

The IQAN-MC4x is a family of master controllers in the IQANdesign platform. There are 3 versions that can be used in different ways to meet the requirements of any system.

- MC41 for cost efficient task oriented control
- MC42 mid-size applications and I/O distribution
- MC43 large centralized control saves valuable space

The MC4 family of controllers share the same pinout, making it possible for easy up-/down-scaling of the application. They are designed to be either a *performance optimized* standard controller, or an IEC 61508 SIL2 *Functional Safety* (FS) variant. When applying EN ISO 13849-1 for safety functions, the FS variant can be used as a PLd subsystem.

The MC4 family utilizes a high performance 3 core CPU for fast closed-loop control and large applications.

There is up to 1.5 MB application memory and 2 MB log memory in the IQAN-MC4 for complete machine control and a future proof solution.

The MC4 architecture has lockstep CPU and hardware redundancy for very high real-time performance in safety critical applications.

The Tri core processor offers fast application cycle time down to 1ms.

The MC4 family supports CAM - a Parker Hannifin proprietary solution for precision control of proportional mobile valves.

- No tuning or tweaking CAM regulator circuit guarantees consistent performance on mobile valves
- Precision control with a resolution down to 1 mA, a must when there is need for controlling precise crane movements
- Zero drift control provides the lowest possible output offset current and drift

Parker Hannifin's zero drift CAM offers initial offset current of less than 5 mA and almost immeasurable offset current drift over time, temperature and load change.

I/O

The MC4 family can support up to 50 inputs and 36 outputs (see table):

- 32 analog inputs for reading 0-5V, 0-32V and 4-20mA sensor signals
- 6 timer inputs for speed and position sensors up to 50KHz - PWM is also supported
- 18 digital inputs for switch signals
- 10 CAM outputs for precision control of up to 10 directional proportional valves
- 8 PWM outputs capable of driving 6 A loads (when in parallel)
- 8 low-side digital outputs for LED lamp control
- 5 CAN and Ethernet for in-vehicle network and diagnostics

Capabilities	MC41	MC42	MC43
vmAC core			
MCU triple core 300 MHz	✓	✓	✓
Program memory (Flash/SRAM)	0.5 MB / 0.5 MB	1 MB / 1 MB	1.5 MB / 1.5 MB
Data log memory (Dflash)	2 MB	2 MB	2 MB
Settings and counter memory (FRAM)	32 KB	32 KB	32 KB
Inputs total	18	18	50
Voltage inputs: 12-bit, 0 – 5 V	8	8	26
Voltage inputs: 12-bit, 0 – 32 V	2	2	2
Current-loop inputs: 13-bit, 0 – 20 mA	2	2	4
Timer inputs (Freq., PWM, Pulse): 0 – 50 KHz	6	6	6
Digital inputs	6	6	18
Outputs total	8	16	36
COU (HS)* outputs: 100 – 2500 mA high-side	2 x 2	6 x 2	10 x 2
PWM/Digital outputs: 4 A high-side	4	4	8
COU/PWM (LS)* outputs: 2.5 A low-side	4	12	20
Digital outputs: 300 mA low-side	-	-	8
Network			
CAN	2	3	5
Ethernet	-	✓	✓

The inputs and outputs can have different functionality depending on software configuration.

* - denotes pins that are always used in combination with another pin.

Installation

The IQAN-MC4 family's 155 mm [6.1"] x 166 mm [6.5"] footprint is small enough for any installation.

To meet the environment found in mobile machines the MC4 uses the Molex MX123 high reliability connector system, made for

harsh environment, high vibration applications.

The enclosure is rated IP66 + IP69K and is a rugged mechanical design, sealed for outdoor use.

The MC4 family has CE and E-mark certifications.

WARNING - USER RESPONSIBILITY

FAILURE OR IMPROPER SELECTION OR IMPROPER USE OF THE PRODUCTS DESCRIBED HEREIN OR RELATED ITEMS CAN CAUSE DEATH, PERSONAL INJURY AND PROPERTY DAMAGE.

This document and other information from Parker-Hannifin Corporation, its subsidiaries and authorized distributors provide product or system options for further investigation by users having technical expertise.

The user, through its own analysis and testing, is solely responsible for making the final selection of the system and components and assuring that all performance, endurance, maintenance, safety and warning requirements of the application are met. The user must analyze all aspects of the application, follow applicable industry standards, and follow the information concerning the product in the current product catalog and in any other materials provided from Parker or its subsidiaries or authorized distributors.

To the extent that Parker or its subsidiaries or authorized distributors provide component or system options based upon data or specifications provided by the user, the user is responsible for determining that such data and specifications are suitable and sufficient for all applications and reasonably foreseeable uses of the components or systems.
