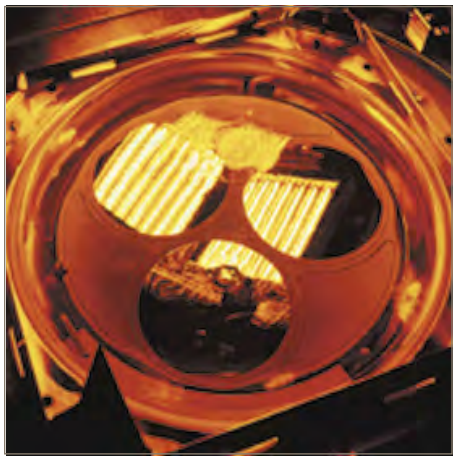
Microelectronics Sealing Guide

High Performance Fluorinated Elastomers for Semiconductor Service



Outstanding Performance :

In the semiconductor market, cleanliness and performance of seals is paramount in maximizing chip output and decreasing down time. Parker supports the market by continuously developing next generation compounds that are designed to improve MTBF and COO.

Through extensive R&D efforts, Parker has developed HiFluor™ and ULTRA™ lines of elastomeric compounds to support the semiconductor market in every process; from surface preparation to completed wafer testing. When looking for ways to improve your semiconductor applications, why not build with the best? Build with Parker.

Value Added Services:

- Superior material technology
- Depth of product offering/ total sealing solutions
- Logistics (distributors/ service centers)
- Competitively priced
- Speed to market, 2-4 week delivery if not in stock
- Field support
- Applications engineering assistance
