

# Gasoline Filtration

S3220SUL and S3228SUL  
For Marine Applications

These filters are specifically designed to retrofit existing Racor filters installed on outboard or inboard vessels, main propulsion or power generation engines.

The new S3220SUL and S3228SUL 2-micron filters are offered as retrofits to Racor clear or metal bowl filter assemblies.

Recent changes to gasoline fuel blends have resulted in many boaters requesting a more efficient, high performance media for contaminant and water removal. Racor's 2-micron Aquabloc® media has been used successfully in demanding diesel engine fuel injection system applications. Gasoline users can expect the same high performance and efficiency.

One effect of ethanol blended fuel is fuel tank and fuel system component "cleansing" resulting in more contaminants in the fuel stream. Racor filters trap particles in their Aquabloc® media which also repels the damaging water into the drainable collection bowl.

## Contact Information

Parker Hannifin Corporation

www.parker.com/racor

Racor S3220SUL and S3228SUL remove up to 100% of water and 98% of 4-micron particulate from your fuel per SAE J905. Droplets of water and contaminants such as rust, plastic, and sand collect in the bowl for draining.

The 2-micron Aquabloc® filter media repels microscopic water droplets where they coalesce and fall into the bowl. Smaller particles, slimes, and varnishes are trapped by the filter medium and prevented from reaching the engine's fuel system. Contaminates are easily removed by periodically draining the collection bowl.

## Features and Benefits

- Corrosion Resistant
- Ethanol Compatible
- Rugged and Reliable
