Source Capture Solutions
EXTRACTION ARMS, HOODS & ACCESSORIES
Why Choose Our Extraction Arms & Extraction Hoods?

Performance
• No internal obstructions provide lower resistance and greater extraction power.
• Optimized extraction arm hood geometry provides capture from greater distances and locations requiring fewer position adjustments and less interference.
• Base-mount and wall-mount extraction hoods offer the broadest “effective zone” of any source capture system on the market today.

Durability
• Durable metal construction stands up to the most challenging industrial applications.
• Powder-coated finish that has passed a 500-hour salt spray test.
• Flexible joints feature UL flame resistant material for use in thermal processes where sparks are routinely present.

Flexibility
• Extraction arm ships fully assembled for fast and easy installation.
• Wide range of sizes and configurations provide the right solution capable of contaminant capture and fitting within your process.
• The control tension at each extraction arm joint is adjustable for better positioning control.
• The hood pivots independent of the extraction arm for easy positioning.
• Base-mount and wall-mount extraction hoods can be adapted to a multitude of operators' work area requirements.
Source Capture Solutions

Capture, Extract, Filter
The most effective and energy-efficient way to control nuisance airborne emissions is to collect the pollutant at or near the source of generation. The benefits of source capture include:

• Reduced facility cleaning and maintenance by preventing pollutant migration.

• Improved worker health by protecting the breathing zone from harmful pollutants resulting in higher productivity plus lower absenteeism due to illness.

• Lower operational costs by capturing contaminants at the source which requires the least amount of energy consumption.

• Achieve a cleaner and healthier workplace and stay compliant with environmental regulations by stopping the spread of fumes, smoke, dusts and other airborne pollutants at the source with United Air Specialists’ extraction arms, telescopic arms, hoods and accessories.

Recommended Applications
• Thermally-generated Fumes
• Welding
• Plasma and Laser Cutting
• Soldering
• Metalworking
• Mixing, Batching and Filling Stations
• General Workbench Processes and Applications

Complete System
Our extraction arms and hoods can be connected to UAS’ wide range of central system and work station DustHog® and SmogHog® collectors for fully automated control and capture of airborne pollutants. Our Application Engineers will help you configure a system to meet your specific process requirements.
Extraction Arm Features & Specifications

- Wire-reinforced, UL flame rated flexible duct
- Powder-coated aluminum tubes
- Heavy-duty cast aluminum joints with external adjustment
- Bell mouth extraction hood with 360° integrated handle
- 360° swivel base

- Model XA Wall-Mount Extraction Arm Reach
- Model XA-T Telescopic Extraction Arm Reach
Extraction Hood Features

United Air Specialists base-mount and wall-mount extraction hoods are designed specifically for use in applications where minimal hood movement is required. They are available in four models to meet your specific process and work area requirements, including a hood only option.

Source Capture Accessories

- Arc sensors
- Exhaust fans (Blowers)
- Hood mounted on/off switch
- Hood with light kit
- Magnetic hoods with wear strip flexible duct
- Extension boom arms
- Wall mounting brackets

Parker Hannifin is committed to providing clean air solutions that protect your employees, improve plant performance and enable you to realize your operating goals.

Our commitment is backed by continuous investment in research, leading-edge technology and product development, our people whom are the most knowledgeable in the industry, and a product portfolio that is proven to deliver results. We have been solving problems for you, our customers across the globe for over 50 years.
