Introduction

Parker Fluid Control Division Europe is your ideal partner offering the broadest range of solutions for Beverage Dispensers.

Thanks to Parker’s great expertise and attitude to innovate we are today in the position to offer a broad range of robust and exclusive solutions.

In fact, all our products have been developed in order to achieve the best performances in high demanding Professional equipment.

Market segments

- Professional Coffee Machines
- Vending distributors for hot drinks
- Semi-Professional and Domestic Coffee Machines
- Automatic Water Dispensers
Applications

Typical applications in Beverage Dispensers are:

- Water loading control of a boiler
- Steam control
- Cold, hot and superheated water shut-off
- Cold water and steam mixing
- Steam pressure control (Pressure Switch)

Benefits

Parker was the first company developing the **ruby sealing** system for solenoid valves. Our expertise in this technology makes our product extremely efficient against limescale build-up.

High performing and low power consumption electrical parts, with a wide range of configurations and approvals are available.

The strong and robust design provides you with high reliability minimizing the risk of failures when your equipment is operating and avoiding downtime.
Technical Information about solenoid valves

General Information
Solenoid valves are as electro-mechanic devices for interrupting or diverting the flow of fluids by opening or closing one or more orifices.

The solenoid valve is a combination of three basic components:
1. An electromagnet consisting of a solenoid (windings) and a magnetic yoke.
2. A moveable plunger (which, in some cases directly opens and closes the valve).
3. A valve body with an orifice opened or closed by plunger or diaphragm to enable or prevent flow of the medium.

Operating principles
The term "solenoid" refers to operator and coil, also known as "pilot" or "magnetic actuator".
The coil consists of capillary copper wire wound on a support reel. When electric current is fed into the coil magnetic flow lines are generated which are stronger in the centre of the coil.
This magnetic flow raises the moveable plunger in the coil until it brings it into contact with the pole piece.
The valve body has an orifice through which the liquid or gas flows when the valve is open.
The moveable plunger has an integral seat which when the solenoid coil is energised, moves off the valve (direct operated) orifice or diaphragm (pilot operated) orifice opening the valve.
When the coil is de-energised, a return spring brings the plunger back in the original closing position, thus cutting off the flow of the fluid.
### Basic components of a solenoid valve

<table>
<thead>
<tr>
<th>Component</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Valve body:</strong></td>
<td>Main part of the solenoid valve including ports, seats and orifice passages.</td>
</tr>
<tr>
<td><strong>Solenoid tube assembly:</strong></td>
<td>Cylinder, in stainless steel, hermetically sealed and closed at one end. It is the guide channel of the moveable plunger which is moved magnetically. The solenoid coil is fitted on the external side of the enclosing tube.</td>
</tr>
<tr>
<td><strong>Moveable plunger:</strong></td>
<td>Made by ferritic stainless steel, it is attracted by the solenoid magnetic field and slides inside the tube.</td>
</tr>
<tr>
<td><strong>Plunger spring</strong> (or return spring):</td>
<td>Used to hold the moveable plunger in position and to return it into its position when de-energized.</td>
</tr>
<tr>
<td><strong>Seat seal:</strong></td>
<td>Mounted on the moveable plunger, it is used to close a valve main orifice or a pilot orifice.</td>
</tr>
<tr>
<td><strong>Electromagnet</strong> (or solenoid coil):</td>
<td>Electrical part consisting of a copper windings (solenoid) along with, with a magnetic yoke (armature), when electric current flows through, it generates a magnetic flux attracting the moveable plunger.</td>
</tr>
</tbody>
</table>
Technical vocabulary for using the tables

The basic technical features of each solenoid valve model are indicated in the tables with the following headings:

Port Size: Fitting dimensions are defined as threaded in inches (G) or sub-base, when a flat interface for ports is adopted.

Orifice: Main orifice diameter in millimetres (nominal diameter).

Flow Factors: Defined as the quantity of water, temp. between +5°C and +30°C, which flows through the solenoid valve with a pressure drop of 1 bar (100 KPa-0.1 MPa), in m³/h (cubic metres per hour) and in l/min (liters per minute).

Minimum pressure: The lowest differential pressure required for operation, in bar.

Maximum differential pressure (MOPD): The highest working differential pressure with 90% of the rated voltage (-10% Vn) applied to the solenoid coil for AC) and with 95% of the rated voltage (-5% Vn) (for DC).

Fluid maxi. temperature: Maximum admissible temperature for the media used. In °C.

Seat disc: Material used for the seat discs.

Pressure Vessel: Ordering code referring to the pressure vessel only. Standard housing (washer, nut, aluminium plate) is included with the pressure vessel.

Electrical part: Compatible electrical part reference.

Power consumption: Power consumption of a specific electrical part on selected pressure vessel, rated by AC and DC, in W. Power consumption must be considered in cold condition for the coil, at TAmb: +20°C. For 483510, 481865 and 496081 series, power consumption indicated in the tables must be considered in warm conditions. See also details in each electrical part description (pages 36-44).

Weight: Weight of the complete valve without accessories, in grams.

Safe Body Working Pressure: Ref. EN 1333:2007 (PN) the maximum admissible pressure at 20°C which can be applied to the solenoid valve to check the tightness of the mechanical seals (threads, welds) and the mechanical resistance of the materials.

General Description

Material Specifications: A description of the materials used for each solenoid valve family.

Installation: The valves can be mounted in any position. It is however recommended to install them with the coil in vertical position above the body.

Media: These valves have been developed to achieve the best performances with cold and hot water, superheated water and steam. Within the main description of the family you will be able to find out the recommended media and application.

Electrical parts Electrical parts compatible with each solenoid has been indicated directly in the main datasheets you will find at pages 18 to 35. Details about electrical parts specifications are available at pages 36-44. Please consult also the "How to order" section at page 50 on how to select the product configuration which fits your application requirements.

Product Selection

This catalogue has been designed to make selection as easy as possible. The structure allows you to find your valve step by step, beginning with the most basic features and gradually focusing on more and more precise details.

To make the selection easier we have included in each valve description an indication about typical applications, like water loading and cold water control, superheated water and steam control.

In the first column you will be able to identify the port size, and proceeding you will meet all the available product solution.
Solutions for Professional coffee machines
2/2 Pipe mounting
Direct acting - Normally closed

146 Series

This product family has 1/8" and 1/4" ports and various flow rates. A robust design ensures good performances and high reliability against limescale build up. A wide range of electrical parts can be used with this valve, including IP65 and IP67 solutions. Typical application for 146 Series is cold water loading or hot water shut-off.

Fluids: Cold and hot water, within the media temperature limits.
Valve body: Moulded brass, CW617N UNI EN 12165.
Seals: FKM
Sleeve and plungers: Stainless Steel.

PN 20 bar

All dimensions are in mm
140.2 Series

140.2 Series is a valuable solution for cold water, hot water and steam on-off control. Compact and robust at the same time, the stainless steel nozzle improves valve life, endurance and resistance to lime-scale build up effect.

A wide range of electrical parts might be used with this valve, including IP65 and IP67 UL solutions.

Typical application for 140.2 Series is cold water loading function or hot water-steam on/off control.

**Fluids:** Hot water and steam, within the media temperature limits.

**Valve body:** Moulded brass, CW617N UNI EN 12165: Nickel plated brass for NSF certified versions.

**Seals:** Ruby/FDA FKM/EPDM.

**Plungers and nozzle:** Stainless Steel.

### 7121Z-121K Series

7121Z and 121K are the best solution when top-class performances are required, because of the entire stainless steel structure of the valve pilots. Compact and robust at the same time, the stainless steel nozzle improves valve life, endurance and resistance to lime-scale build up effect. A wide range of electrical parts might be used with this valve, including IP65 and IP67 UL solutions.

Typical application for 7121Z-121K Series is cold water loading function or hot water-steam on/off control.

**Fluids:** Cold water, hot water and steam.

**Valve body:** Moulded brass, CW617N UNI EN 12165/Nickel plated brass for NSF certified versions.

**Seals:** FKM/FDA FKM/Ruby.

**Sleeve, plungers and nozzle:** Stainless Steel.

# 161.4 Series

161.4 Series is a robust and compact solution with a good value for money. A wide range of product solutions including 1/8" and 1/4" ports and different flow rates are available. Compact design and small size operator make this valve a good solution whenever a space savings are targeted. A wide range of IP65 electrical parts might be used with this valve.

Typical application for 161.4 Series is cold water loading function or hot water on/off control.

**Fluids:** Cold and hot water, within the media temperature limits.

**Valve body:** Moulded brass, CW617N UNI EN 12165.

**Seals:** FKM

**Plungers:** Stainless Steel.

746 Series

746 Series is a 2/2 valve with a precise manual flow regulator integrated. The structure of the flow control is made by stainless steel to ensure reliability. Therefore the robust design makes this part less sensitive to deterioration and increase the repetitiveness and precision and in calibration during the life of the valve.

A wide range of electrical parts might be used with this valve, including IP65 and IP67 UL solutions.

Fluids: Cold and hot water, within the media temperature limits.
Valve body: Nickel plated moulded brass.
Seals: FKM
Sleeve, plungers: Stainless Steel.
Regulation Screw to adjust flow rate: Stainless Steel.

#### 141 Series

141 Series wide range includes 1/8" and 1/4" ports and different flow rates. A robust design ensures good performances and reliability. A wide range of electrical parts might be used with this valve, including IP65 and IP67 solutions. Typical application for 141 Series is the superheated water/steam on/off.

**Fluids:** Cold and hot water, steam within the media temperature limits.

**Valve body:** Moulded brass, CW617N UNI EN 12165:98/ Nickel plated brass for NSF certified version.

**Seals:** FKM/Ruby/FDA-FKM.

**Plungers:** Stainless Steel.

**Nozzle** Stainless steel for 141.2YV and 141.2YVA.5.

128 Series

128 Series is a compact and reliable 3/2 sub base valve for hot and superheated water. A robust design ensures good performances and reliability. A wide range of electrical parts might be used with this valve, including IP65 and IP67 solutions.

Typical application: superheated water and steam on/off control.

Fluids: Hot water, steam within the media temperature limits.
Valve body: Moulded brass, CW617N UNI EN 12165/Nickel plated brass for the NSF listed version.
Seals: FKM-Ruby
Plungers: Stainless Steel.
Nozzle: Stainless Steel, Brass for 128IV.

175 Series

175 Series is a small, compact and flexible solution, with a robust stainless steel operator. A wide range of IP65 electrical parts and UL-recognized electrical parts might be used with this valve. Typical application: cold water, hot water and steam on/off control.

**Fluids:** Cold and hot water, steam within the media temperature limits.

**Valve body:** Moulded brass, CW617N UNI EN 12165.

**Seals:** FKM.

**Sleeve and plungers:** Stainless Steel.

N79.4-N79.6 Series

N79 Series is a small, compact and flexible solution, with a robust stainless steel operator. Port size from 1/8" to 1/4" ports and different flow rates are available. A wide range of IP65 electrical parts and UL-recognized electrical parts might be used with this valve. Typical application: cold water, hot water and steam on/off control.

Fluids: Cold and hot water, steam within the media temperature limits.
Valve body: Moulded brass, CW617N UNI EN 12165.
Seals: FKM.
Sleeve and plungers: Stainless Steel.

491514 Series
32 mm UL-Recognized Coil

This is an encapsulated assembly comprising a coil, integral magnetic-iron path and snap-on plug connection. The synthetic material encapsulated provides an effective compact housing, offering full protection against dust, oil, water, etc. Ease of mounting in confined space - offers shock and corrosion protection. IP65 insulation class to be considered with connector plug only.

This coil is UL-approved as a recognized component for the insulation Class F, conforms to the IEC/CENELEC safety standards and complies with European low-voltage directive 73/23/EC.

**Specification:**
- UL-recognized coil - UL file MH19410.
- Duty: Continuous duty coil (100%ED).
- Weight: 180 g.

**Specification:**
UL recognized coil - UL file MH19410.

**Voltage tolerances:** -10% to +10% of the nominal voltage (AC), -5% to +10% of the nominal voltage (DC).

**Duty:** Continuous duty coil (100%ED).

**Weight:** 180 g.

Pressure Switch PS325-1C Series

PS325-1C pressure switch has normally closed contacts and a fixed differential. This device operates as threepole switch for the direct command of tree-phases circuits. The pressure switch is equipped of 3 normally closed power contacts (B scheme), when the pressure exceeds the "off" value the contacts will open switching off the electric circuit.

The contacts will close if the pressure decrease under the "on" value P-ΔP (see A scheme). Parker PS325-1C Pressure Switch range is UL certified.

GENERAL FEATURES

- Plenum chamber body of forged brass.
- Sensible element at double diaphragm; reinforced elastomer with Teflon diaphragm (PTFE) in contacts with the fluid.
- Zinc-iridated metal parts.
- Self-extinguishing plastic materials V0-1.6.
- In-let G 1/4" with biconic connection.

Two fairland Ø 12 mm.

- Degree of protection IP20 (IP40 with optional cable gland).
- Adjustment sensitivity "off" pressure; 1 complete turn corresponding approximately at 5% of the pressure range.

ΔP Differential fixed.

Electrical Features

- Nominal voltage of isolation Uᵢ 415 VAC
- Nominal current of continuous duty 25 A
- Nominal current in AC-1 duty 25 A
- Nominal current in AC-3 duty 9 A

Conformity with CEI EN 60947-1, CEI EN 60947-4-1

Dimensions:
Please refer to Dimensional drawing N° 29

Parker Connectors for Beverage Dispensers

A broad range of high quality fittings, tubing and accessories for your fluid circuits

A philosophy that benefits nature, technology, and mankind by protecting our natural resources and optimizing energy use thanks to the performance of our industrial tool. Permanent and continuous improvement, by changing old habits and promoting new materials and concepts.

- Achieving environmental regulations as: ISO 14001, RoHS, Reach...
- Developing eco-design on every new product
- Informing OEMs and final customers thanks to environmental footprint data sheets.

**LIQUIfit™**

Leak-free instant fittings in a 100% bio-based compact body. LIQUIfit™ offers optimum performance suitable for contact with water, beverages and food, as well as being the most compact profile on the market. The many advantages of this range include EPDM patented sealing technology, full flow, no pumping effect and minimized internal retention.

**Technical Specifications**

- **Working Pressure:** from -0.9 to 16 bar (depending on the product type)
- **Working Temperature:** -10°C to +95°C (depending on the product type)

**Material Specifications**

- **Body and threads:** bio-based material
- **Gripping ring:** stainless steel
- **Thread sealant:** PTFE
- **‘D’ ring:** EPDM

**Instant Fittings**

**Secure your Connections**

Tamper-Evident Safety Clip

A solution that makes tampering obvious and warns that: the application is sensitive and that disconnection could endanger persons and goods.

- Limits disconnection operations to workers with a toolbox
- Reinforces the warning
- Gives evidence of tampering
- Enables colour coding

**LF 3000® stud elbow**

Standard product on the market LF 3000

04 - Ø12 mm
05/32 - Ø1/2 inch

Parker Connectors for Beverage Dispensers
**PVDF**
The PVDF instant fittings range offers the perfect trade-off between chemical and pressure resistance at high temperatures. Available upon request, this range (from Ø4 to Ø8 mm) can be delivered with brass or stainless steel sub-bases, as well as FKM or EPDM seals.

**Technical Specifications**
- **Working Pressure:** up to 15 bar (depending on temperature and product type)
- **Working Temperature:**
  - up to 150°C for straight fitting
  - up to 130°C for other fittings

**Material Specifications**
- **Body:** PVDF
- **Sub-base:**
  - High phosphorus chemical nickel-plated brass
  - Lead-free brass (<0.2%)
  - Stainless steel 316L
- **Gripping ring:** stainless steel
- **‘O’ ring:** FKM or EPDM

**LF 3600 Nickel-Plated Brass**
The LF 3600 fittings range, a range of extremely robust fittings. Resisting temperatures of up to 150°C, and functioning at 99% vacuum at as high as 30 bar, the LF 3600 is the one and only brass instant fitting on the market capable of such a performance.

**Technical Specifications**
- **Working Pressure:** from 0.9 to 30 bar (limited to 20 bar for compact swivel elbows 3699, 3609)
- **Working Temperature:**
  - -20°C to +150°C

**Material Specifications**
- **Body/Collet/Washer/Sub-base:**
  - Stainless steel 316L (LF 3900)
  - Stainless steel 303 (LF 3800)
- **Sub-base:**
  - High phosphorus chemical nickel-plated brass
  - Lead-free brass (<0.2%)
  - Stainless steel 316L
- **‘O’ ring:** FKM
- **‘D’ ring:** FKM or EPDM

**LF 3900/LF 3800**
LF 3900: a range of instant fittings in full 316L stainless steel, with FKM seals, for optimum resistance to aggressive environments.

LF 3800: a range of instant fittings in 316L stainless steel with 303 (collet) and FKM seals, for elemental chemical resistance and competitive price positioning.

**Technical Specifications**
- **Working Pressure:** from 0.9 to 30 bar (maxi 20 bar for 3979/3879 and 3989/3889)
- **Working Temperature:**
  - -20°C to +150°C

**Material Specifications**
- **Body/Collet/Washer/Sub-base:**
  - Stainless steel 316L (LF 3900)
  - Stainless steel 303 (LF 3800)
- **Sub-base:** stainless steel 316L
- **‘O’ ring:** FKM
Cartridges
The cartridge system allows you to save time during assembly, requires less machining, eliminates risk of faulty assembly and allows for the possibility of having different tube diameters for only one cavity diameter. There’s no risk of losing the seal with this one-piece fitting.

Technical Specifications
- Working Pressure: from -0.9 to 20 bar
- Working Temperature: -20°C to +60°C

Material Specifications
- Retaining sleeve: brass
- Gripping ring: stainless steel
- Seal: EPDM

Universal Compression Fittings
Universal compression fittings are designed to solve all fluid distribution problems and provide a complete system of fittings suited to all types of tubing (copper and stainless steel) and valve assemblies thanks to the flexibility offered by the vast range of accessories: olives, sleeve nuts, reducers, tube adaptors.

Technical Specifications
- Working Pressure: up to 150 bar (depending on the product type)
- Working Temperature: up to 150°C (depending on the product type)

Material Specifications
- Body/Olive*: brass or stainless steel
  *Available in lead-free brass (<0.2%) upon request

PL Nickel-Plated Brass Fitting for Plastic Tubing
The PL fitting’s unique sealing method make it ideally suited for use with a wide variety of media.
It is particularly suitable for use in fluid handling applications where media or temperature considerations limit the method of sealing.
PL is a two-piece nickel-plated brass fitting specifically designed for flexible tubing such as polyamide, polyurethane, PEBA, polyethylene, PTFE, PVC…
The seal is obtained by the bead formed at the tube end when the nut is tightened to the fitting body. The connection is leakproof to the burst pressure of the tube. PL fittings can be assembled and disassembled repeatedly.

Technical Specifications
- Working Pressure: from 0.01 to 40 bar
- Working Temperature: -40°C to +100°C

Material Specifications
- Body/Nut*: Nickel-plated brass
  *Available in lead-free brass (<0.2%) upon request
Tubing

Advanced PE
Made from high-grade polyethylene, “Advanced PE” tubing ensures the best balance between flexibility and pressure/temperature resistance. Resistant to a wide range of aggressive chemical agents. Complies with international regulations and certifications for food and drinking water and standard W270 regarding micro-organism growth on materials. Available in nine colours and eight diameters.

How to Order

A complete solenoid valve is composed by 3 elements: the **pressure vessel**, the **housing** and the **coil**. All the parts listed in this catalogue are supplied with the standard housing integrated, therefore your selection process is easier: you have to choose the pressure vessel and the electrical parts in the main tables from page 18 to page 35.

Electrical parts technical details and available voltages are described from page 38 to page 42.

You can order pressure vessel and electrical part together, or separately.

Step 1

Select the pressure vessel reference needed at pages 18-35.

Step 2

Select coil at pages 36-44.

Step 3

Select accessories at page 45.

Ordering a product or a configuration not listed in the catalogue.

When an application demands a combination of features not listed in the catalogue, please feel free to contact the closest Parker office. Parker personnel will assist in determining the applicability availability and price of the new product.

WARNING - USER RESPONSIBILITY

FAILURE OR IMPROPER SELECTION OR IMPROPER USE OF THE PRODUCTS DESCRIBED HEREIN OR RELATED ITEMS CAN CAUSE DEATH, PERSONAL INJURY AND PROPERTY DAMAGE.

- This document and other information from Parker-Hannifin Corporation, its subsidiaries and authorized distributors provide product or system options for further investigation by users having technical expertise.
- The user, through its own analysis and testing, is solely responsible for making the final selection of the system and components and assuring that all performance, endurance, maintenance, safety and warning requirements of the application are met. The user must analyze all aspects of the application, follow applicable industry standards, and follow the information concerning the product in the current product catalog and in any other materials provided from Parker or its subsidiaries or authorized distributors.
- To the extent that Parker or its subsidiaries or authorized distributors provide component or system options based upon data or specifications provided by the user, the user is responsible for determining that such data and specifications are suitable and sufficient for all applications and reasonably foreseeable uses of the components or systems.
