Compact Fluid Power Systems

Catalog HY22-1131/US
FAILURE OR IMPROPER SELECTION OR IMPROPER USE OF THE PRODUCTS AND/OR SYSTEMS DESCRIBED HEREIN OR RELATED ITEMS CAN CAUSE DEATH, PERSONAL INJURY AND PROPERTY DAMAGE.

This document and other information from Parker Hannifin Corporation, its subsidiaries and authorized distributors provide product and/or system options for further investigation by users having technical expertise. It is important that you analyze all aspects of your application and review the information concerning the product or system in the current product catalog. Due to the variety of operating conditions and applications for these products or systems, the user, through its own analysis and testing, is solely responsible for making the final selection of the products and systems and assuring that all performance, safety and warning requirements of the application are met.

The products described herein, including without limitation, product features, specifications, designs, availability and pricing, are subject to change by Parker Hannifin Corporation and its subsidiaries at any time without notice.

EHA CATALOG
Electro-Hydraulic Actuators for high power density applications ......................... 3-4

108-165 SERIES POWER UNITS
AC and DC Motors up to 5.3 lpm (1.4 gpm), up to 241 bar (3500 psi)............... 5-16

550 SERIES POWER UNITS
AC Motors, up to 14.4 lpm (3.8 gpm), up to 207 bar (3000 psi)................... 17-26

MINIATURE PISTON AND 3-PISTON CARTRIDGE PUMPS
AC and DC Motors, up to .865 cc/rev (.01 in³/rev), up to 276 bar (4000 psi)..... 27-35

DC MOTORS
Reversing controls suggestions..................................................................................36

750 SERIES HAND PUMPS ..........no longer available as of July 1, 2019.........
5.9 cc/stroke (0.5 in³/stroke), up to 172 bar (2500 psi), built-in 4-way Valve......... 37-40

09 SERIES HYDRAULIC GEAR MOTORS ..........OBSOLETE PRODUCT.........
1.48 cc/rev (.09 in³/rev), up to 345 bar (5000 psi), up to 25000 rpm ................. 41-42

PRESSURE SWITCHES ..........no longer available as of July 1, 2019........
Up to 345 bar (5000 psi), Single or Duplex Models............................................. 43-46

OFFER OF SALE .......................................................................................................................47
Oildyne Division

The Oildyne Division of Parker Hannifin Corporation has been manufacturing top quality compact hydraulic products since 1955. Anywhere in the world where there is a need for a compact fluid power system solution requiring flows up to 14.4 liters per minute (3.8 gallons per minute) and pressure to 276 bar (4000 psi), or integrated electro-hydraulic actuators, Parker Oildyne can provide the answer from concept to completion. Parker Oildyne is a company dedicated to providing solutions for today's high pressure, space saving, and power-dense hydraulic installations.

Parker Oildyne’s current state-of-the-art manufacturing facility has been in operation since January 1999. An ISO9001 approach to delivering premium customer service is supported by a dedicated team of design, manufacturing and quality engineers using the latest technologies and equipment. Parker Oildyne pioneered the miniaturization of hydraulic components and offers this expertise to you.

Parker Oildyne products are used in a large range of diverse industries such as marine equipment, recreational vehicles, automotive, medical, material handling, construction equipment, turf care, industrial equipment and many more. Expand your hydraulic usage with compact fluid power systems from Parker Oildyne.

*Note: Oildyne products are designed to industrial standards; they are not to be used in aircraft applications.*
Compact EHA
Electro-Hydraulic Actuators for high power density applications
**Easy to Install and Connect**

Compact EHA is designed to make commissioning as simple as possible. The motor is connected to a suitable power supply and switching circuit, and the rod or base end is secured with a pivot pin. The unit is then actuated to align the opposite pivot pin connection, and the pin inserted to secure. And that’s it – your Compact EHA is ready for use.

**Specifications**

**Actuator**
- **Type**: hydraulic, double-acting
- **Bore sizes**: 25.4mm (1.0 in), 31.8mm (1.25 in), 36.5mm (1.44 in)
- **Standard stroke lengths**: 102mm (4 in), 152mm (6 in), 203mm (8 in)
- **Piston rod diameters**: 14.2mm (.561 in), 15.9mm (.625 in), 19.1mm (.750 in)
- **Standard mounting pin diameters**: 6.4mm (.250 in), 9.5mm (.375 in), 12.7mm (.500 in)

**Motor**
- **Motor types**: 12V DC, 245W (motor A)  
  12V DC, 560W (motor B)  
  24V DC, 245W (motor C)  
  24V DC, 560W (motor D)
- **Leads – length**: 1.5m (60 in)
- **Leads – gauge**: 14 gauge (motors A & C)  
  12 gauge (motors B & D)
- **Connector type**: ring terminals, 6.6mm (.26 in) I/D

**Pump**
- **Pump type**: gear, reversible
- **Pump capacities**:
  - .100 gear = .16cc/rev (.010 in³/rev)
  - .190 gear = .31cc/rev (.019 in³/rev)
  - .250 gear = .41cc/rev (.025 in³/rev)
  - .327 gear = .53cc/rev (.032 in³/rev)
- **Fluid medium**: automatic transmission fluid (ATF)

**Circuit**
Sealed hydraulic circuit with integrated pump, motor, actuator and reservoir, relief, thermal, check and back pressure valves.

**Certification and Testing**
- **Vibration**: MIL-STD-810F
- **Sealing**: IP65 and IP67
- **Salt spray**: 1000 hours per ASTM B117
- **CE marked**: in conformity with Machinery Directive 98/37/EC and 2007/42/EC

For other application-specific approvals, please consult factory.

**Performance**
- **Maximum force – extend**: 21.35kN (4800 lbf)
- **Maximum force – retract**: 16.00kN (3600 lbf)
- **Maximum speed**: 84mm/sec (3.3 in/sec)

**General**
- **Construction – body**: anodized cast aluminium
- **Construction – piston rod**: stainless steel
- **Orientation**: universal
- **Manual release option**: retained, for emergency use only
- **Operating temperature range**: -34°C (-30°F) to +65°C (150°F)
- **Sound Level**: < 70 dBA
- **Weight**: under 5.5 kg (12 lbs)

**Maintenance**
Because the Compact EHA is flushed, filled and sealed for life, there is virtually no maintenance required. This, in combination with the anodized housing, stainless steel rod and rugged seals and components, provides a longer service life with reduced warranty costs.

**Complete Compact EHA Solutions**
In addition to custom actuators, our engineers are experienced in the design of complete actuation systems. Where your requirement includes cable harnesses, switchgear and power supplies, please contact us for further information.

For current Compact EHA literature, please call 1-800-CParker (1-800-272-7537) or e-mail to c-parker@parker.com and ask for Catalog Number HY22-3101.
Oildyne 108/118 and 165/175 Series
Hydraulic Power Units
Pressures to 241 bar (3500 psi)
Flow to 5.3 lpm (1.4 gpm)
108 and 165 Series
Self-contained
Hydraulic Power Units

The Oildyne Division’s compact 108/165 Series power units let you put the power where you need it. They’re completely self-contained with an AC or DC motor, gear pump, reservoir, internal valving, load hold checks and relief valves.

The 108/165 Series models are designed for intermittent service and come in six standard pump sizes which produce flows of .16, .31, .41, .52, .82 and 1.06 cc/rev (.0098, .0187, .0246, .0321, .050 and .065 cubic inches/rev). Locking check valves are available in all models. Performance will vary with the type of fluid used. Several hydraulic circuits are available.

108/165 Series units are available with single- or bi-directional rotation. Single direction units are commonly used to charge accumulators, power one-direction hydraulic motors and cylinders, provide pilot flow to servo valves, pressurize lube systems and supply multifunction circuits using external valving.

Bi-directional, reversible units operate double-acting cylinders and two-way motors.

New are the 118 and 175 Series codes. Instead of the standard threaded ports, these new versions provide a four-bolt, flat manifoldable surface to accept the solenoid manifold circuit or your custom manifold.

We’d like to work with you on your hydraulic applications. Our people know small hydraulics. We know how to design them, how to make them and how to apply them. Therefore, we can offer you a practical, economical solution to your fluid power problems.

Oildyne has pioneered top quality, compact hydraulic components since 1955. We can provide standard products or tailor high pressure, space saving solutions to your specific needs.

Note: Parker Oildyne products are not to be applied in aviation applications.

NOTES: C and D reservoirs are Vertical Mount only
A, B and F reservoirs are available only for 108/118 Series
Reservoir A with .32 pump cannot be horizontal mount

ORDERING CODE INSTRUCTIONS
Select the model code needed based on catalog information. All boxes above must be filled in before Oildyne can process the order. If the power unit is a single direction unit use '00' for the DN (Right Hand) relief valve box. For circuits LL and LB, the two relief valve settings should be within a 5:1 ratio.

ALL DATA SUBJECT TO CHANGE WITHOUT NOTICE
FOR POWER UNIT CONFIGURATIONS OTHER THAN THOSE SHOWN PLEASE CONSULT OILDYNE.

Hydraulic Fluid
Acceptable fluids for 108/118/165/175 Series Power Units:
- Standard Automatic Transmission Fluid (ATF)
- Most mineral based hydraulic fluids
Viscosity range: 32-64 cSt (150-300 SSU) at 38°C (100°F).

Temperature Range
Temperature Ranges for 108/118/165/175 Series:
Operating: -7 to +60°C (-20 to +140°F)
Storage: -7 to +60°C (+20 to +140°F)
Please contact Parker Oildyne for usage outside of this range.
Performance Data

108/118 Series: Permanent Magnet Motors - AE/BE

Note: IA motor (36 VDC) flow will be equivalent to the AE/BE curves: current draw will be about 1/3 of the AE motor values

DC Motor Duty Cycle Characteristics

108/118 Perm. Magnet Motors – AE/BE (for intermittent duty cycles only)

Current Draw vs On Time General Guidelines at 21°C (70°F)

For electrical controls suggestions, see page 36
Performance Data

108/118 Series: Series Wound Motors - AM/BI

Note: IC motor (36 VDC) flow will be equivalent to the AM/BI curves:
current draw will be about 1/3 of the AM motor values

Performance data for reference only. Based on ATF at 21°C (70°F)
Performance Data

108/118 Series: AC Motors - HA/HD

NOTES:
• S2 = 5  Maximum recommended ON time for the HA/HD motors is 5 minutes, after which the motors must be OFF until cooled to ambient temperature
• 50 Hz performance is about 83% of curves shown

108/118 Series HA Motors (115 VAC)
1) For Single Direction only, and Reversible with UP port pressure:

108/118 Series HD Motors (230 VAC)
1) For Single Direction only, and Reversible with UP port pressure:

For electrical controls suggestions, see page 36.
To reverse rotation, interchange the Black and Red wires.
Performance data for reference only. Based on ATF at 21°C (70°F)
**Performance Data**

165/175 Series: Permanent Magnet Motors - AY

Note: BY motor (24 VDC) flow will be equivalent to the AY curves; current draw will be about 1/2 of the AY motor values.

### DC Motor Duty Cycle Characteristics

**165/175 Series AY Motor**
1) For Single Direction only, and Reversible with UP port pressure:
   - Terminal 1: Ground
   - Terminal 2: +12 VDC
2) Reversible with DN port pressure:
   - Terminal 1: +12 VDC
   - Terminal 2: Ground

**165/175 Series BY Motor**
1) For Single Direction only, and Reversible with UP port pressure:
   - Terminal 1: Ground
   - Terminal 2: +24 VDC
2) Reversible with DN port pressure:
   - Terminal 1: +24 VDC
   - Terminal 2: Ground

Performance data for reference only. Based on ATF at 21°C (70°F)
Single Direction Circuits

**108/165 Series Single Direction NN Circuit**

**108/165 Series Single Direction WW Circuit**

**118 and 175 Series S1 - S4 Circuit (N.C. valve)**
**S5-S8 Circuits use N.O. Valves**

**Thermal Relief Valves — Why?**

The thermal relief valve's (TRV) purpose is to allow a bleed off of built up pressure due to thermal expansion of the fluid or to act as a (very limited) shock load protection, should a cylinder in the system get bumped.

The thermal relief valve is included in circuits using a pilot operated check valve. The single direction units get one; the reversing units get two. It is located between the check valve and the 108 Series pump outlet port. It is a fixed relief valve with a pressure setting approximately 100-140 bar (1500-2000 psi) above the system relief valve pressure.
**Reversible Circuits**

**108/118 and 165/175 Series RR Circuit (Reversible)**

**108/118 and 165/175 Series LL Circuit (Reversible Locking)**

**108/118 and 165/175 Series RB Circuit (Reversible with Back Pressure)**

**108/118 and 165/175 Series LB Circuit (Reversible Locking with Back Pressure)**

---

**Back Pressure Circuits – Why?**

The basic reversible circuit is essentially a closed loop. The oil returning from the system is fed back into the pump inlet. When a cylinder is being retracted more oil is being returned to the power unit than is leaving it due to the rod volume. This results in the DN side relief valve cracking open allowing the rod volume of oil to go back to the tank. The larger the rod volume the more open the relief valve will be. In many applications this is not a problem. However, if work is being done on the retract stroke, or if a pressure switch is used to signal the cylinder is fully retracted, the back pressure circuit is required. This circuit allows the rod volume of oil to return to the reservoir through a special shuttle spool, before it reaches the pump. Full relief valve pressure is then available to retract the cylinder, also preventing a pressure switch from tripping before the full retract position is achieved.

**Recommended uses:**
- In systems where work is being done on the retract stroke
- Where a pressure switch is used to signal the full retract position
- In systems requiring a faster retract than extend speed

---

**Note:** Back Pressure circuits (RB and LB) require the UP ports to be connected to the extend ports of cylinders.
Reservoir Dimensions

Note: refer to page 16 for information on the H, I, J, P, Q, R and S reservoirs.

165 Series shown with “G” reservoir

Note: All dimensions in mm (inches).
108 Series shown with Series Wound motor and “A” reservoir

118/175 Series with solenoid manifold and “D” reservoir (motor shown is 108/118 Series Permanent Magnet)

Please contact Oildyne for detailed 118/175 adapter dimensions.

Note: All dimensions in mm (inches).
165 Series with H, I, and J reservoirs

108 Series with HA/HD Motor and P, Q, R, and S reservoirs

Note: All dimensions in mm (inches).
Oildyne 550 Series
Hydraulic Power Units
Pressures to 207 bar (3000 psi)
Flow to 14.4 lpm (3.8 gpm)
The 550 Series combines the features and benefits our customers and markets have requested in a durable and economical package. The integral motor, pump and reservoir are complemented with a full line of Parker D03/NG6 and cartridge valve options. Add a linear or rotary actuator and you have a complete hydraulic system solution for your application.

These high quality power units are ideal for industrial machine tool clamping circuits, dock levelers, food processing, hose crimping, scissor lift, presses, and a myriad of AC applications. Let them go to work for you.

Your local Parker sales representative will be pleased to provide further information.

Typical Applications
- Machine tool clamping
- Dock levelers
- Man lifts
- Scissors lifts
- Wheelchair lifts
- Trash compactors
- Hose crimpers
- Boat lifts
- Presses
- Commercial ovens

Features
- Numerous motors from .67 to 4 kW (.5 to 3 HP)
- 7 pump sizes – flows from 1 to 14.4 lpm (.25 to 3.8 gpm)
- Externally adjustable relief valve
- Variety of reservoirs
- 207 bar (3000 psi) capability
- D03/NG6 pad or standard P and T ports
- Vertical and horizontal mounting

**RESERVOIR VOLUME**

- Note: 19 liter (6 gallon) steel reservoir can be mounted vertically only. All others are vertical and horizontal ready.

**CIRCUIT**

- D0: D03/NG6 Pad & Extension Fittings  
- D1: D03/NG6 Pad with Dual PO Check Manifold (Manapak) (for use with D03/NG6 Directional Control Valves)  
- SA: Standard Pressure & Tank Ports  
- SW: Std P & T Ports with Outlet Port Check Valve

**Two Position Two Way Cartridge Valves**

Following circuits include outlet port check valve:

- S1: 12 VDC, Normally Closed, Conduit Connector  
- S2: 24 VDC, Normally Closed, Conduit Connector  
- S3: 120 VAC, Normally Closed, Conduit Connector  
- S4: 240 VAC, Normally Closed, Conduit Connector  
- S5: 12 VDC, Normally Open, Conduit Connector  
- S6: 24 VDC, Normally Open, Conduit Connector  
- S7: 120 VAC, Normally Open, Conduit Connector  
- S8: 240 VAC, Normally Open, Conduit Connector  
- P1: 12 VDC, Normally Closed, DIN Connector  
- P2: 24 VDC, Normally Closed, DIN Connector  
- P3: 120 VAC, Normally Closed, DIN Connector  
- P4: 240 VAC, Normally Closed, DIN Connector  
- P5: 12 VDC, Normally Open, DIN Connector  
- P6: 24 VDC, Normally Open, DIN Connector  
- P7: 120 VAC, Normally Open, DIN Connector  
- P8: 240 VAC, Normally Open, DIN Connector

**Reservoir**

- Steel reservoir can be mounted vertically only.

**Examples**

- In multiples of 100 psi
  - RV SETTING: 2900 psi  
  - = 1200 psi  
  - = 400 psi

NOTE: For optimal performance of the D1 circuit, using an Open or Tandem center D03/NG6 valve is recommended.
Dimensions

Note: All dimensions in mm (inches).

550 Series shown with P and T ports and plastic reservoir

Note: When mounted in the horizontal configuration the 21/2 gallon plastic reservoir must be supported.

Motor foot dimensions are common to all 550 Series electric motors.
550 Series shown with optional solenoid 2-way valve and steel reservoirs

Note: All dimensions in mm (inches).
550 Series shown with 19 liter (5 gallon) steel reservoir and NG6/D03 valves

Note: All dimensions in mm (inches).
Miniature Piston Pumps
5 Piston & Cartridge Design

Pressures to 276 bar (4000 psi)
Displacements from .156 to .865cc/rev (.01 to .05 in³/rev)

Parker

ENGINEERING YOUR SUCCESS.
Miniature Piston Pumps: Pumping Efficiencies up to 90% Allow Effective Use of .156 to .865 cc/rev Piston Pumps at Pressures to 276 bar (4000 psi)

Breakthrough designs come and go, succeed and fail. The really good designs pass the test of time and continue to succeed. The Oildyne Division mini pump is one of these good designs.

Mini pumps handle hydraulic oil, brake fluid, ultra-low viscosity fluids and many non-water based fluids with equal ease. Need greater versatility? These fixed displacement axial piston pumps are efficient and powerful too. Tests run on 15.1 cSt (78 SSU) fluid at 38°C (100°F) at 207 bar (3000 psi) showed a 90% volumetric efficiency. Capable of 276 bar (4000 psi) operation, mini pumps are available in nine displacements ranging from .156 to .865 cc/rev (.01 to .053 in³/rev).

Compact size, versatility, efficiency, power and speed are combined in a very competitive package in the Oildyne mini pumps. They’re suitable for many applications requiring compact power including automotive, marine, medical and military uses.

Cartridge Piston Pumps: Compact Fluid Power Redefined by the Oildyne Division.

This cartridge piston pump raises the standard for compact fluid power! This three-piston cartridge style pump is an efficient, fixed displacement pump that provided high performance at a very economical price. Pressure ratings up to 276 bar (4000 psi), driven speeds up to 5000 RPM, and the ability to provide a variety of seal types make this the solution to your unique application. This uni-rotational pump is capable of pumping non-water based fluids ranging in viscosity from solvents to thick fluids.

The three-piston cartridge pump maintains the performance and flexibility of the Oildyne five-piston, standalone pump while reducing the overall package dimensions.

This ultra-compact cartridge piston pump, approximately 33 mm (1.3 in) in diameter and 51 mm (2 in) long, is designed to fit into your specially machined manifold allowing for a custom package that fits your space needs.

Three standard displacements are available all within the existing physical size. (The internal cam angle determines the displacement).

Contact Oildyne Division for a drawing showing the cavity details as well as the motor shaft and flange details needed for your motor to drive and mount this pump to your manifold.

Cartridge Pump Features
- .1 to .33 cc (.006 to .020 in³) displacement per revolution
- Designed for manifold mounting
- Fixed displacement – Output flow is determined by motor drive speed.
- Operating temperature range: -40° to +149°C (-40° to 300°F)
- Inlet port on side or rear
- Will operate efficiently on extremely thin (5 cSt) fluid
- Tandem pumps, special configurations and bi-rotational pumps are available.

See Page 34 for Cartridge Pump ordering code.

Notes:
1. Tandem pumps must have the larger displacement called out first
2. Tandem pumps are not available with the standard AC or DC motors - only standard shaft or 56C kit
3. Drive shaft input torque must be under 3.5 Nm (525 in-oz) (equivalent to HRS865 operating at 207 bar (3000 psi); refer to catalog performance curves for torque data)
4. Bi-rotational pumps require the side port as case drain
5. For configurations not shown above please contact Oildyne

New Hope, MN 55428 USA
Performance Data

Performance data shown are the average results based upon a series of laboratory tests of production units and are not necessarily representative of any one unit. Tests were run with 15.1 cSt (78 SSU) fluid.

In accordance with our policy of continuing product development, we reserve the right to change specifications shown without notice.

Note: Performance data is for reference only.
Typical Performance Data
at 12 VDC as assembled with a standard DC motor

NOTE: 24 VDC motor current will be approximately 1/2 of the 12 VDC current shown here. Max current for continuous operation is:
12 VDC: 12.6 A
24 VDC: 9.6 A

Average Input Torque
Speed: 3000 RPM

Note: Performance data is for reference only.
NOTES:
The 115 VAC performance shown is at 60 Hz. At 230 VAC the current draw will be approximately ½ of that shown. At 50 Hz, the flow will be about 5/6 of that shown and the current will be about 25% higher than the 60 Hz values. Performance data shown is for reference only.

Pressure Switches for AC Power
3.4-345 bar (50-5000 psi) Range

......no longer available as of July 1, 2019......
Pressure Switch Features

- **Versatile**
Our designs allow the switches to be used in any mounting orientation. They can sense hydraulic fluid pressure or air/gas pressure. A simple spring change allows the same basic switch to be used through a wide range of pressure settings.

- **Durable**
Heavy-duty electrical contacts are rated for 15 amps at 125, 250 or 460 VAC. Normally open and normally closed contacts are provided.

- **Reliable**
Repeatability is accomplished through a combination of a PTFE seal and a hardened, nickel-plated steel piston. This use of low-friction materials and the design of the unique PTFE seal (or diaphragm) prevents the piston from sticking. Repeatability, sensitivity and reliability are excellent. Limited piston movement prevents inertial forces from damaging the piston stop.

Typical Applications

Pressure switches sense when a pre-selected fluid pressure is reached or lost and make or break an electrical circuit. Their operation can stop or start a machine’s cycle, actuate indicator lights or sequential operations. Properly installed, their operation is automatic and limited by your imagination and need.

- **Spring Range**
Duplex models contain two separate switches which can be activated by one or two sensing ports depending on the subplate configuration. See dimensional data for options.

- **Environmentally Resistant**
Environmentally resistant models are available on special order.

Subplates

Subplates are available for in-line mounting of Oildyne pressure switches. This allows further flexibility in mounting to existing equipment. Ports in 1/8 NPT or 7/16-20 (SAE-4) straight thread are standard. The duplex switch has two types of subplates, one with a port for each side of the switch, the other with one port only, for both sides of the switch.

---

**Construction**

- All aluminum construction
- O-ring seal for leak proof operation
- Stainless steel sintered metal disc or diaphragm
- PTFE seals for minimum friction and zero leakage
- Sealed piston, no drain lines needed
- Spring
- Adjusting screw makes changing pressure setting easy
- Heavy duty electrical switch with normally open and normally closed contacts
- Easily removed cover for access to electrical connections
- 1/2" pipe conduit connection

---

...no longer available as of July 1, 2019.......

Dimensions

Single Pressure Switch

Subplates (Single & Duplex)

Single

Duplex

Note: All dimensions in mm (inches).

Weight

Single
Standard .3 kg (10 oz.)

Duplex
Standard .4 kg (14 oz.)

Electrical Duty

Single pole, double throw element, U.L. rated for 15 amps at 125, 250 or 460 VAC. Electrical leads are not furnished with the switch.

Recommended Oil

Any clean hydraulic fluid. Standard Buna N seals supplied, optional fluorocarbon rubber seals also available.

No price adjustment will be made for any delay. Buyer shall remit payment for all deliveries in accordance with the terms and conditions of Buyer’s order or any other document or other communication issued by Buyer. Seller reserves the right to charge interest on overdue invoices at the rate of 1.5% per month or the maximum allowable rate under applicable law.

3. Shipment; Delivery; Title and Risk of Loss. All delivery dates are approximate. Seller will ship within the time specified by the terms and conditions of this agreement, or as otherwise stated in writing by Seller. Buyer will be responsible for all risks and loss of damage to Products upon placement of the Products with the shipper. If Products are shipped F.O.B. Buyer’s facility or any other point of delivery, title and risk of loss shall pass to Buyer upon delivery and Buyer shall purchase insurance to cover the risk of loss in transit.

4. Warranty. Seller warrants that the Products sold hereunder shall be free from defects in material or workmanship for a period of twelve (12) months from the date of delivery or 2,000 hours of normal use, whichever occurs first. No other warranty is expressed or implied. No warranty shall apply to defects resulting from improper selection, use, or maintenance or from any act or omission of Buyer or from natural causes or acts of God. No warranty is made for use of the Products in any application or for use of the Products in any country or jurisdiction beyond those covered by Seller’s acts or omissions.

5. Claims; Commencement of Actions. Buyer shall promptly inspect all Products upon receipt. No claims for shortages will be allowed unless reported to Seller within ten (10) days of delivery. Any other claims against Seller will be allowed unless asserted in writing within thirty (30) days after delivery. Buyer shall notify Seller of any alleged breach of warranty within thirty (30) days after the date the defect is or should have been discovered by Buyer. Any claim or action against Seller based upon breach of contract or any other theory, including tort, negligence, or strict liability, must be commenced within twelve (12) months from the date of the alleged breach or other alleged event, without regard to the date of discovery.

6. LIMITATION OF LIABILITY. IN THE EVENT OF BREACH OF WARRANTY, SELLER WILL AT ITS OPTION REPAIR OR REPLACE A DEFECTIVE PRODUCT, OR REFUND THE PURCHASE PRICE WITHIN A REASONABLE PERIOD OF TIME. IN NO EVENT IS SELLER LIABLE FOR ANY SPECIAL, INDIRECT, INCIDENTAL, OR CONSEQUENTIAL DAMAGES, WHETHER ARISING OUT OF SALES, DELIVERY, NON-DELIVERY, SERVICING, USE OR LOSS OF USE OF THE PRODUCTS OR ANY PART THEREOF, OR FOR ANY CHARGES OR EXPENSES OF ANY NATURE, OR FOR ANY INJURY TO PERSON, PROPERTY, OR BUSINESS, WHETHER CAUSED BY SELLER’S FAILURE TO PERFORM IN CONTRACT, TORT OR OTHER LEGAL THEORY. IN NO EVENT SHALL SELLER’S LIABILITY UNDER ANY CLAIM MADE BY BUYER EXCEED THE PURCHASE PRICE OF THE PRODUCTS.

7. User Responsibility. The user, through its own analysis and testing, is solely responsible for making the final selection of the system and Product and assuring that all performance, endurance, maintenance, safety and warning requirements of the application are met. The user must analyze all aspects of the application and follow all performance, endurance, maintenance, safety and warning requirements of the Product and all applicable industry standards and Product information. If Seller provides Product or system options based upon data or specifications provided by the user, the user is responsible for determining that such data and specifications are suitable and sufficient for all applications and reasonably foreseeable uses of the Products or systems.

8. Loss to Buyer’s Property. Any designs, tools, patterns, materials, drawings, confidential information or equipment furnished by Buyer or any other items which become Buyer’s property, will be considered obsolete and may be destroyed by Seller after two (2) consecutive years have elapsed without Buyer ordering the manufacturing or manufacturing using such property. Seller shall not be responsible for any loss or damage to such property while it is in Seller’s possession or control.

9. Special Tooling. A tooling charge may be imposed for any special tooling, including without limitation dies, fixtures, molds and patterns, acquired to manufacture Products. Such special tooling shall be and remain Seller’s property notwithstanding payment of any charges by Buyer. In no event will Buyer acquire any interest in apparatus belonging to Seller which is utilized in the manufacture of the Products, even if such apparatus has been specially manufactured for Buyer’s use by Seller. Buyer shall be responsible for all tooling charges paid by Buyer. Unless otherwise agreed, Seller has the right to alter, discard or otherwise dispose of any special tooling or other property in its sole discretion at any time.

10. Buyer’s Obligation: Rights of Seller. To secure payment of all sums due or otherwise, Seller retains a security interest in all Products delivered to Buyer and this agreement is deemed to be a Security Agreement under the Uniform Commercial Code. Buyer authorizes Seller as its attorney to execute and file on Buyer’s behalf all documents Seller deems necessary to perfect his security interest.

11. Improper Use and Indemnity. Buyer shall indemnify, defend, and hold Seller harmless from any losses, claims, liabilities, damages, lawsuits, judgments and costs (including attorney fees and defense costs), whether for personal injury, property damage, or loss, arising out of any copyright infringement or any other claim, brought by or incurred by Buyer, Buyer’s employees, or any other person or entity, arising out of, based upon, or in connection with, application, operation, design, specification or other misuse of Products purchased by Buyer from Seller; (b) any act or omission, negligent or otherwise, of Buyer; (c) Seller’s use of patterns, plans, drafts, or specifications furnished by Buyer to manufacture Products; or (d) Buyer’s failure to comply with these terms and conditions. Seller shall not indemnify Buyer under any circumstance except as otherwise provided.

12. Cancellations and Changes. Buyer may not cancel or modify or cancel any order for Products or any part thereof, except as otherwise stated in writing by Seller. Buyer must give Seller written notice of alleged defects in the Products or Services within sixty (60) days after delivery of the Products or Services, or in the case of in-process Products or Services, within sixty (60) days from the date of invoice (or such date as may be specified by Seller’s Credit Department). Unpaid invoices beyond the specified payment date incur interest at the rate of 1.5% per month or the maximum allowable rate under applicable law.

13. Limitation on Assignment. Buyer may not assign its rights or obligations under this agreement without the prior written consent of Seller.

14. Force Majeure. Seller does not assume the risk and is not liable for delay or failure to perform any of Seller’s obligations by reason of events or circumstances beyond its reasonable control (hereinafter “Events of Force Majeure”). Events of Force Majeure shall include without limitation: accidents, strikes or labor disputes, acts of any government or government agencies of nature, delays or failures in delivery from carriers or suppliers, shortages of materials, or any other cause beyond Seller’s reasonable control.

15. Waiver and Severability. Failure to enforce any provision of this agreement will not invalidate that provision; nor will any such failure prejudice Seller’s right to enforce that provision in the future. Invalidation of any provision of this agreement by legislation or other authority shall not invalidate any other provision herein. The remaining provisions of this agreement will remain in full force and effect.

16. Termination. Seller may terminate this agreement for any reason and at any time by giving Buyer thirty (30) days prior written notice. Seller may immediately terminate this agreement upon Buyer’s bankruptcy or Buyer’s liquidation, insolvency, or assignment for the benefit of creditors.

17. Governing Law. This agreement and the sale and delivery of all Products are deemed to have taken place in, and shall be governed and construed in accordance with, the laws of the State of Ohio, as applicable to contracts executed and wholly performed therein and without regard to conflicts of laws principles.

18. Indemnity for Infringement of Intellectual Property Rights. Seller is not liable for infringement of any patents, trademarks, copyrights, trade dress, trade secrets or similar rights except as provided in this Section. Seller will defend and indemnify Buyer against allegations of infringement of U.S. patents, U.S. trademarks, copyrights, trade dress and trade secrets (“Intellectual Property Rights”). Seller will defend at its expense and will pay all court costs, attorney fees, and expenses of any action or claim of infringement brought against Buyer based on an allegation that a Product sold pursuant to this agreement infringes the Intellectual Property Rights of a third party, Seller’s obligation to defend and indemnify Buyer includes Seller’s right to conduct its defense, and any compromise or settlement of such allegations of infringement, and Seller having sole control over the defense of any allegations or actions including all negotiations for settlement or compromise. If a Product is subject to a claim that it infringes the Intellectual Property Rights of a third party, Seller may, at Seller’s election and expense, either cease use of the Product, substitute a non-infringing Product, modify the allegedly infringing Product so as to make it noninfringing, or offer to accept return of the Product and refund the purchase price less a reasonable allowance for depreciation. Notwithstanding the foregoing, Seller is not liable for claims of infringement based on information provided by Buyer, or directed to Products delivered hereunder for which the designs are specified in whole or part by Buyer, or infringements resulting from the modification, combination or use in a system of any Product sold hereunder.

19. Entire Agreement. This agreement contains the entire agreement between the Buyer and Seller and constitutes the final, complete and exclusive expression of the terms of sale. All prior negotiations, letters of intent, drafts of agreements, or negotiations respecting agreements or negotiations for the subject matter are herein merged. The terms contained herein may not be modified unless written in full and signed by an authorized representative of Seller.

20. Compliance with Laws. Buyer agrees to comply with all applicable laws, regulations, rules, and orders promulgated at any time by any governmental entity of the United States of America, the United Kingdom, the European Union, or any country or countries in which Buyer may operate and hold Seller harmless from the consequences of any violation of such provisions by Buyer, its employees or agents. Buyer acknowledges that it is familiar with the provisions of the U. K. Bribery Act, the FCPA, the FDA, and the Anti-Kickback Act, and certifies that Buyer will adhere to the requirements thereof. In particular, Buyer represents and agrees that Buyer will not make any payment or give anything of value, directly or indirectly to any governmental official, any foreign political party or official thereof, any candidate for foreign governmental office, any commercial or political office, or any commercial entity or person, for the purpose of influencing such person to purchase Products or otherwise benefit the business of Seller.
At Parker, we’re guided by a relentless drive to help our customers become more productive and achieve higher levels of profitability by engineering the best systems for their requirements. It means looking at customer applications from many angles to find new ways to create value. Whatever the motion and control technology need, Parker has the experience, breadth of product and global reach to consistently deliver. No company knows more about motion and control technology than Parker. For further info call 1 800 C-Parker (1 800 272 7537)
