Heavy duty equipment requires heavy duty engine air intake filtration. Racor’s AFCS air cleaners are designed and built to meet the requirements for gasoline and diesel powered engines. They are designed for high dust environments with excessive vibration and extreme temperatures. Racor AFCS air cleaners are the economical choice for your heavy duty applications.

Replacing the existing air cleaner with a Racor combination system requires just a few additional inches in length and requires virtually no maintenance. The precleaner is self-powered and self-cleaning, requiring no electrical or exhaust gas power to dispose of the separated particles.

**Product Features**

- Removes up to 90% of impurities from intake air
- Extends engine air filter life
- Prolongs engine and turbocharger life
- Safety element is standard (most models)
- Steel housing is black powder coated
- Adjustable mounting band is standard
- Restriction indicator port is standard (most models)
- Wide range of applications and flow rates
- High air flow, low differential design
- Reduces down time

How They Work

Air enters the precleaner portion though static vanes causing the air to spin. As the air spins, centrifugal force separates dust, dirt, insects, rain, and snow from the air stream. The swirling air drives a high velocity rotor that acts as a blower, evacuating contaminants through special discharge ports in the side of the assembly. Only purified air flows to the air filter.

Applications include agricultural machinery, earth moving equipment, construction, mining equipment, stationary engines, generator sets, big rig trucks, pick ups, off road vehicles, material handling equipment, snow removal equipment, street sweepers, and any engine from 30 to 260 HP (22 to 194 KW).
