Double Block and Bleed Flanged Products with Fugitive Emission options

Catalog 4190-FP
July 2007
Introduction

Parker Hannifin’s response to the demand for reduction in leakage paths has been the combination of primary and secondary valves into one compact unit. The combining of piping and instrument valves into a single unit has benefitted various markets. Products can be offered which meet class ‘A’ or class ‘B’ levels of ISO 15848 standard for fugitive emissions, as required.

Parker Hannifin can offer the unique combination of double block and bleed valve systems together with integral fittings, both being designed and produced by one company. Selection of this combination results in the elimination of taper thread connections and the need for thread sealant. For more information on leak path reductions and how to combine connections and valves into one unit, please contact us.
Primary, secondary and vent valve applications and installations

Solutions
Parker Hannifin offers the unique solution by incorporating primary and secondary valve systems into one complete block. In addition traditional instrument taper thread connections can be totally eliminated resulting in systems being free of thread sealant contamination.

Conventional Installation [1]
• A welded flange, connected to a primary ANSI class isolating valve. The primary valve will be connected to a secondary instrument valve. A pressure gauge or transmitter will then be installed downstream of the instrument valve.

Parker Pro-Bloc ® [2]
• A one-piece integral forging incorporating up to 3 ball valves or mixture of ball and needle design.
• Improved safety: leak paths reduced by up to 60%
• Reduced costs: installation and component costs reduced by up to 70%
• Reduced weight: by up to 80%
• Reduced susceptibility to problems caused by vibration.

Parker Monoflange [3]
• More compact than Pro-Bloc®, adding further space and weight saving possibilities.
• Improved safety: leak paths reduced by up to 60%, less susceptibility to vibration
• Reduced costs: installation and component costs reduced by up to 80%
• Reduced weight: by up to 85%

See pages 17-26 for standard and fugitive Emission products.

Parker Hi-Pro Manifolds [4]
• Enables the user to continue to use traditional NPT threaded connections and at the same time utilise the double block and bleed principals Available in several combinations of ball and needle valves.

Full details can be found in CAT 4190 HBM.

Design codes
• All Parker Hannifin Double block and bleed designs comply with the following codes.
• ANSI/ASME B16.34 (Designed to meet the pressure and temperature requirements)
• ANSI/ASME B1.20.1 (Threads)
• ANSI/ASME B16.5 (Dimensions)
• BS6755 PART 2/API 607 (Fire safe designed to meet the requirements and verified by internal testing)
• ISO 15848 for fugitive emissions.
Flanged Products

Ball valve specification

Specifications
• 316 Stainless steel construction.
• Maximum cold working pressure rating 6,000 psig (414 barg) with P.T.F.E. seats.*
• Temperature rating PTFE seats -29°C to +204°C (-20°F to +400°F).*
• Maximum cold working pressure rating 10,000 psig (689 barg) with PEEK seats.*
• Temperature rating PEEK seats -29°C to +232°C (-20°F to +450°F).*
*always refer to P/T graph

Features
• Two piece body design - minimal leakage paths.
• 4:1 Pressure boundary designed safety factor.
• Designed to comply with requirements of ANSI/ASME B16.34 where applicable.
• Bi-directional.
• PEEK and PTFE standard ball seat materials.
• PTFE and Graphoil gland packings.
• Bubble tight shutoff.
• Floating ball principal with dynamic response seats featuring inherent self relief.
• Anti blowout stem.
• Integral compression ends available eliminating taper threads and thread sealants.
• Low torque operation.
• Quarter turn positive stop handle with ergonomically designed protective sleeve.
• Full hydrostatic and low pressure air tested.
• Connector thread environmentally sealed.
• Anti static.
• FireSafe designed to meet BS6755 Part 2/ API 607, (optional).

Flanged Products

Outside screw and yoke (O.S.&Y.) needle valve

Features
- Externally adjustable gland.
- P.T.F.E. or Graphite packing for bubble tight sealing.
- Self centering crimped needle tip for bubble tight shut off and repeatability.
- Available in 316, Monel, Duplex, Super Duplex, Hasteloy, Inconel, Incoloy, 6Mo, Carbon Steel, other materials on application.
- Stainless steel as standard.
- Optional wetted parts in a variety of exotic materials.
- Firesafe certified to BS6755 part 2/ API 607.
- Pressure rating up to 10,000 psig (690 barg).
- Temperature -54°C to 538°C (-65°F to 1000°F).
- Body to bonnet flange gasket for 100% atmospheric seal.
- Back stopped spindle for blow out prevention, and minimum atmospheric leakage.
- Rolled spindle operating threads.
- Independent spindle thread bush with maximum female thread interface.
- Colour coded close contact dust cap and function label for easy identification.
- Optional: NACE compliance, heat code trace certification, oxygen clean.

Features

- Rolled spindle operating threads for low torque operation.
- Gland packing in PTFE or Graphite for bubble tight sealing.
- Colour coded close contact dust cap and function label for easy identification.
- Available in 316L, Monel, Duplex, Super Duplex, Hasteloy, Inconel, Incoloy, 6Mo, Titanium, other materials on application.
- T-bar operating handle for low torque function.
- Self centering crimped needle tip for bubble tight seat sealing.
- Close contact dust cap for operating thread protection.
- Back seated spindle for blow out prevention and minimum atmospheric leakage.
- Adjustable gland with easy access.
- Gland lock nut for vibration protection.
- Pressure rating up to 10,000 psig (690 barg).
- Temperature rating -54°C to -538°C (-65°F to 1000°F)
- Optional bolted bonnet design available, firesafe certified.
- Optional: NACE compliance, heat code trace certification, oxygen clean.

When selecting products for specific applications users should refer to our notice at the bottom of page 27.

Monoflange (MF) manifolds

Purpose
This manifold range is designed to replace conventional multiple-valve installations currently in use for interface with pressure measuring systems. By combining customer specified valves into a single manifold, the number of leak paths is considerably reduced and the mass of the system is lowered reducing the stresses from loading and vibration. The result of which substantially improves installation and operational safety factors. Reduction in leakage path connections together with a one-piece solution also provides positive installation cost savings. Suitable for Fugitive Emission requirements.

Key advantages of Parker Monoflanges
- Strong construction produced from one piece grain flow controlled forged body.
- Various flow and valve configurations available allowing true flexibility to meet all customer requirements.
- Variety of flange sizes and outlet connections.
- Standard materials of Carbon Steel A105, Low Temperature Carbon Steel A350 LF2, Stainless Steel A182-F316 and Duplex Stainless Steel A182-F51.
- Optional materials include Super Duplex, Monel, Hastelloy, 6Mo, Incoloy 625.
- Incorporation of standard “H” series needle valve technology and state of the art O.S &Y. design.
- 4mm Needle valve orifice.
- Ergonomically designed operating handles with low torque function.
- Full range of customer retro fit handle options.
- User friendly part number and specification construction system.
- Customised designs welcome.
- Available to meet ISO 15848, Class A.

Instrument outlet connections
One of the unique features Parker can offer users which can further enhance safety factors is the incorporation of single or twin ferrule compression fittings as an integral part of the outlet connection. Installation of the instrument which require remote positioning will be interconnected using conventional tube and fittings, whilst NPT taper threads are accepted as a standard their use involves some form of thread sealant which adds to the complication of instrument performance through contamination within the system. Avoiding these taper thread connections wherever possible reduces this contaminant risk and Parker, being a leading manufacturer of compression type of fittings (which requires no sealant mediums), can incorporate them in the outlet connection, totally eliminating the contamination risk.
**Monoflange features**

- 1/2” to 2” N.B. Flanges (15 to 50 DN).
- ANSI B16.5 150 to 2500 flange class and API 10,000.
- 1/2-14 NPT (female) standard outlet.
- 1/4-18 NPT (female) standard vent.
- Variety of optional end connection sizes and thread forms including tube connections 1/2”/12mm diameter.
- Optional materials include Super Duplex, Monel, Hastelloy, 6Mo, Incoloy.
- Combined needle and O.S.&Y. valves available.
- Instrument connections A-LOK® inverted available.
- Raised face and ring type joint flange face styles.
- One-piece forged construction flange as standard.
- H needle design with retro fit handle options.
- Optional fire safe designed (and tested) to meet BS6755 part 2/API 607.
- Pressure boundary designs calculated to ASME VIII Div. 1 and verified by testing.
- 4:1 Factor of Safety.
- Heat code traceable material to EN10204.3.1.
- Bubble tight shut off valve seats 17-4 PH tips standard.
- Optional PEEK tips available.
- Colour coded functional valves.
- Optional locking and anti tamper devices for all valve types available.
- NACE MR 0175/ISO 15156 compliant material available on request.
- Permanent marked body with full order and specification details.
- Available with various non-threaded connections, please contact us.

**Standard specification:**
Outlet - 1/2” FNPT
Vent - plugged 1/4” FNPT
Seat - metal to metal
Packing - PTFE
**Monoflange (MF) manifold selection and part number construction - made easy**

Select the style of Monoflange from the choice of arrangements below noting the complete MF reference. If the style or arrangement is not shown below please provide full description and specification.

IMPORTANT NOTES

When selecting products for specific applications users should refer to our notice at the bottom of page 27.

All non wetted parts will be supplied in standard stainless steel for exotic materials. For carbon steel construction trim materials will be supplied in stainless steel.

Ring type joints (T) CANNOT be supplied for 1/2” & 3/4” class 150 flanges.

St. St. grades 302 and 304 are NOT used in the construction of any of these products.

For customer specific options not covered here engineering will allocate a part number at quotation stage.

Certification requirements and customer specifications MUST be provided at enquiry and order stage.

For API flange requirements full details must be specified separately.

Part number example MFY100B32T2500A3F Monoflange - Double Block and Bleed - Block (O.S.&Y.) Bleed (Needle) Block (Needle) (MFY100) - 316 St. St. construction (B) - 2” Pipe flange, Ring type joint, class 2500 (32T2500) - 1/2” female NPT outlet - 1/4” Female NPT vent - Anti-tamper vent (A3) - Firesafe design and certified (F), valves fitted with PTFE packing, metal seated 17-4PH st.st. tips.
Pro-Bloc® (PB) Manifolds

Purpose
This manifold range is designed to replace conventional multiple-valve installations currently in use for interface with pressure measuring systems. By combining customer specified valves into a single manifold, the number of leak paths is considerably reduced and the mass of the system is lowered reducing the stresses from loading and vibration. The result of which substantially improves installation and operational safety factors. Reduction in leakage path connections together with a one-piece solution also provides positive installation cost savings.

Key advantages of Parker Pro-Bloc®
- Strong construction produced from one piece grain flow controlled forged body.
- Various flow and valve configurations available allowing true flexibility to meet all customer requirements.
- Single flange, double flange or triple flange configurations available.
- Standard materials of Carbon Steel A105, Low Temperature Carbon Steel A350 LF2, Stainless Steel A182-F316 and Duplex Stainless Steel A182-F51.
- Optional materials include Super Duplex, Monel, Hastelloy, 6Mo, Incoloy 625.
- Incorporation of standard Hi-Pro ball valve and “H” series needle valve technology.
- 10mm/15mm/20mm/25mm full bore valve design.
- Ergonomically designed operating handles with low torque function.
- User friendly part number and specification construction system.
- Optional integral A-LOK®/CPI™ outlet connection.
- **Parker Tru-loc™ (patent pending) safety system.**

**Instrument outlet connections**
One of the unique features Parker can offer users which can further enhance safety factors is the incorporation of single or twin ferrule compression fittings as an integral part of the outlet connection. Installation of the instrument which require remote positioning will be interconnected using conventional tube and compression fittings, whilst NPT taper threads are accepted as a standard their use involves some form of thread sealant which adds to the complication of instrument performance through contamination within the system. Avoiding these taper thread connections wherever possible reduces this contaminant risk and Parker, being a leading manufacturer of compression type of fittings (which requires no sealant mediums), can incorporate them in the outlet connection, totally eliminating the contamination risk.
Pro-Bloc® features

- 1/2” to 3” N.B. Flanges (15 to 50 DN).
- ANSI B16.5 150 to 2500 flange class and API 10,000.
- 10mm/15mm/20mm/25mm full bore valve design.
- 1/2”-14 to 1”-11.5 NPT (female) standard outlet (depending on bore size).
- 1/2” NPT (female) standard vent.
- Variety of optional end connection sizes and thread forms including tube connections up to 1”/25mm diameter (depending on bore size).
- Optional materials on request.
- Instrument connections A-LOK®/CPI™ available.
- Raised face and ring type joint flange face styles.
- One-piece forged construction flange as standard.
- Optional fire safe designed (and tested) to meet BS 6755 Part 2/API 607.
- 316 stainless steel handles and trim as standard to reduce the risk of corrosion.
- Designed to meet the pressure and temperature requirements of ASME/ANSI B16.34/B16.5.
- Pressure boundary designs calculated to ASME VIII Div 1 and verified by testing.
- 4:1 Factor of Safety.
- Heat code traceable material to EN10204.3.1.
- Bubble tight shut off.
- Colour coded functional valves.
- Optional locking and anti tamper devices for all valve types available.
- Positive lever stop.
- NACE MR 0175/ISO 15156 compliance available on request.
- Large user friendly handles.
- Permanent affixed reference label.
- O.S.&Y. and “H” series needle valves can be combined with ball valves.

* Select bore size
   Y - 10mm, X - 15mm, W - 20mm, V - 25mm

Standard specification flange x screw:
Outlet - FNPT; Vent - 1/2” FNPT plugged;
Ball seats. P.T.F.E.; Needle seats, metal/metal
17-4 PH St. St.; P.T.F.E. packing all valves.
Flanged Products

Pro-Bloc® (PB) manifold selection and part number construction - made easy

Select the style of Pro-Bloc from the choice of arrangements below noting the complete PB reference.* Select ball bore size, Y = 10mm, X = 15mm, W = 20mm, V = 25mm. e.g. PWB100 = 20mm ball bore.

● Only available with 10mm bore ball valve.

Note: Contact factory for bore size/outlet connection combinations.

IMPORTANT NOTES

All non wetted parts will be supplied in standard stainless steel for exotic materials. For carbon steel construction trim materials will be supplied in stainless steel.

For flange to flange construction when the required flanges are different sizes then specify both sizes in section 3 example: 1st flange 1” pipe (16), raised face (F), class 900 (900), 2nd flange 1/2” (8), raised face (F), class 900 (900) insert: 16F9008F900. Consult factory for available combinations.

Ring type joints (T) CANNOT be supplied for 1/2” & 3/4” class 150 flanges.

St. St. grades 302 and 304 are NOT used in the construction of any of these products.

For customer specific options not covered here engineering will allocate a part number at quotation stage.

Certification requirements and customer specifications MUST be provided at enquiry and order stage.

For API flange requirements full details must be specified separately.

Part number example FEPBY100B32T2500F Fugitive Emission Pro-Bloc - Flange by screw - Double Block and Bleed - Block (Ball) Bleed (Needle) Block (Ball) (FEPBY100) - 316 St. St. construction (B) - 2” Pipe flange. Ring type joint, class 2500 (32T2500) - 1/2" female NPT outlet - 1/2" Female NPT vent - Firesafe design and certified (F), all valves PTFE packed, ball seats PTFE, needle valve metal seated 17-4PH st.st. tips.
Flanged Products

Pro-Bloc® (PB) Manifolds

Pro-Bloc® for sampling applications (10mm + 15mm bore only)
This manifold range is designed to replace conventional multiple-valve installations where sampling of the process stream is required. This design has been developed to remove a sample directly from the process stream at full system pressure. All of the options and configurations shown within the standard Pro-Bloc range can be offered for sampling service by the addition of a customised sampling probe which extends from the pipe flange into the process stream. Also available to suit ISO15848 Class ‘A’ fugitive emission standard.

Pro-Bloc® for sampling applications - part numbering
In order to specify the addition of a sampling probe to your Pro-Bloc simply add an “S” to the beginning of the part number i.e. SPB or FESPB... The probe length in “mm” must be added to the end of the part number, see below. Due to the internal bore size of standard ASME flanges probes can only be installed on a range of flanges - please see the attached table.

<table>
<thead>
<tr>
<th>Bore</th>

<tr>
<td>15mm</td>
<td>Size 1 1/2” and above, ASME flanges up to class 2500.</td>
</tr>
<tr>
<td>20mm</td>
<td>Not available</td>
</tr>
<tr>
<td>25mm</td>
<td>Not available</td>
</tr>
</tbody>
</table>

The probe length must be specified from the raised face to the end of the probe in mm, to the nearest mm. Probes are supplied to suit the insertion length required by the pipeline and thus must be specified by the customer.
A wide variety of end preparations and support collars are available on request.
Probe strength wake frequency calculations can be carried out against pipeline flow rates on request.
In the event of the required valve configuration not be shown please do not hesitate to contact the factory as Parker Hannifin IPD offer bespoke customer solutions.
Pro-Bloc® for injection applications (10mm + 15mm bore only)
This manifold range is designed to replace conventional multiple-valve installations where injection into the process stream is required. This design has been developed to inject directly into the process stream at full system pressure. All of the options and configurations shown within the standard Pro-Bloc range can be offered for injection service by the addition of a customised injection probe which extends from the pipe flange into the process stream. Pro-Bloc's for injection applications include an injection probe which enables the fluid to be injected directly into the process stream and a high integrity full bore non-return valve to eliminate the risk of backflow out of the process stream. Also available to meet ISO15848 Class ‘A’ fugitive emission standard.

Pro-Bloc® for injection applications - part numbering
In order to specify the addition of an injection probe and non-return valve to your Pro-Bloc simply add a “J” to the beginning of the part number i.e. JPB or FEJ PB... The probe length in “mm” must be added to the end of the part number, see below. Due to the internal bore size of standard ASME flanges probes can only be installed on a range of flanges - please see the table in the sampling Pro-Bloc section (previous page).

The probe length must be specified from the raised face to the end of the probe in mm, to the nearest mm. Probes are supplied to suit the insertion length required by the pipeline and thus must be specified by the customer.

A wide variety of end preparations and support collars are available on request.

Probe strength wake frequency calculations can be carried out against pipeline flow rates on request.

Hi-Check non-return valve
This high integrity full bore non-return valve eliminates the risk of back flow out of the process stream. The design utilises a spring loaded poppet to ensure leak proof performance. The Hi-Check Non Return Valve is designed for higher flow and low pressure drop across the valve - having a larger through bore than most other manufacturers equivalent product.

As standard a viton seal will be supplied with a “crack” pressure of 10 psig. A wide variety of seat materials and crack pressures are available on request.

In the event of the required valve configuration not being shown please do not hesitate to contact the factory as Parker Hannifin IPD offer bespoke customer solutions. See Catalogue 4190-CV for more details.
Meeting the ISO Standard

From October 2007 all UK processing plants and power stations will have to comply with the EU’s IPPC directive 96/61/EC. In essence, the IPPC Directive is about minimising pollution from various industrial sources throughout the European Union. An important part of this legislation is reducing fugitive emissions, which will have significant consequences for all processes. According to the IPPS all plants and factories which fail to comply with the standards set by the directive may be closed from this point.

To put the scale of the challenge into perspective, a typical European refinery loses between 600 and 10,000 tonnes of emissions per annum. Around 70% of these losses are estimated to be caused by plant equipment such as pipe flanges, pumps, valves and vessels. Leakage from valves is often the biggest culprit, reportedly accounting for around 50% of the fugitive emissions within the chemical and petrochemical industries.

Irrespective of the environmental impact, there is a tremendous financial burden on industry because it represents a huge loss of product, and cause of plant inefficiency. However, the true costs to industry are not always appreciated, as many of the costs associated with fugitive emissions are hidden. Such as labour and materials to repair leaks, wasted energy, environmental fines and clean up costs, lost sales due to a poor green image, claims for personal injury and more. In this way, reducing fugitive emissions not only protects the environment, but can save companies time and money.

With the above in mind, the legislation introduces a concept of Best Available Technique (BAT), urging plants to find the best available solution for reducing fugitive emissions throughout the process, from areas such as design, product selection, fitting and fitter training, to maintenance, site monitoring, and so on.

With regard to the design and site monitoring of fugitive emissions ISO 15848 parts 1 and 2 have been developed respectively.

Part 1 covers the classification system and qualification procedure for type testing of valves. The standard specifies three tightness classes of leakage with respect to stem sealing diameter. These classes are class A, B and C. Class A having the smallest environmental leakage. Each class level is one hundred fold lower than the class above i.e. a class B product may have a leakage of 100 times that of a class A product. The standard also specifies the duty that the valve has been tested to.

Parker Hannifin is now able to offer our full range of flanged products with a class A approval to ISO 15848-1. These products are identified as the Fugitive Emissions [Fe] range and are certified as ISO FE AH-C01-SSA1-t(RT,180°C)-ANSI2500-ISO 15848-1. This states that the product has been classified as meeting the ISO 15848-1 standard with the following criteria;

- Class A tested with Helium
- Endurance class C01 – a mechanical valve which has been tested throughout 500 mechanical actuations with two thermal cycles
- Temperature class RT-180°C – Fully thermal cycled and tested from -29°C to +180°C Pressure class ANSI2500 – 6000 psi in 316 st.st.

Part 2 of the international standard covers production acceptance testing of valves. This production testing can only be carried out to product which has already been approved to part 1 of the standard. Production testing can be carried out to and sampling percentage specified by the purchaser with a minimum of one per lot. The production testing is a simpler helium sniffer test which is carried out at room temperature with no mechanical actuations.
Meeting the ISO Standard

Parker is now able to offer its range of Pro-Bloc Double Block and bleed valves and Monoflanges to meet the new ISO 15848 standard for Fugitive Emissions. The new designs provide process instrument interfaces of outstanding integrity to help processing organisations dramatically enhance their LDAR (leak detection and repair) programmes.

ISO 15848 standard

ISO 15848 parts 1&2 (defining a classification system and qualification procedures, and production acceptance test of industrial valves, respectively) specify new ultralow standards for emissions. This standard is becoming the requirement for oil and gas and petrochemical organisations worldwide. The standard was originally created for process valves and control valves but is now being applied to Instrumentation valves which include primary isolation valves, especially on environmentally sensitive projects.

Meeting these low levels is a challenge, which Parker Instrumentation has solved with the new ball and needle valve designs used in these Double Block and Bleed valves and monoflanges. These designs meet the highest class ‘A’ level over the temperature range -29°C to +180°C celsius, alongside the standard instrumentation manifold pressure ranges.

Production testing and certification is available upon request. Please specify sample quantity required for production testing with your order.

O-ring material grade is a fluoroelastomer FKM tetrapolymer, specially formulated for explosive decompression (ED) resistance. The seals are qualified to the stringent Norsok M-170 standard that covers both ED resistance and sour gas (H₂S) ageing tests.

Features

- Class ‘A’ leakage rates achieved.
- Bolted ball valve bonnet assembly.
- All threads sealed from the media
- All ball valves are bi-directional.
- Firesafe design available.
Specifications

- Tightness class A >1 x 10^-6 mg.s^-1.m^-1.
- Maximum cold working pressure rating 6,000 psig.
- Temperature rating -29°C to 180°C (-20°F to 356°F).
- ISO15848-1 prototype tested using global helium vacuum method.
- Performance class – ISO FE AH-C01-SSA1-t(RT,180°C)-ANSI2500-ISO 15848-1
- Production testing and certification available on request.
- Other specifications as per standard Hi-Pro, see page 4.

When selecting products for specific applications users should refer to our notice at the bottom of page 27.
Flanged Products

Fugitive Emission outside screw and yoke (OS&Y) needle valve

Specifications

- Tightness class A \( \geq 1 \times 10^{-6} \text{ mg.s}^{-1}\cdot\text{m}^{-1} \).
- Maximum cold working pressure rating 6,000 psig (414 barg).
- Temperature rating -29°C to 180°C (-20°F to 356°F).
- ISO15848-1 prototype tested using global helium vacuum method.
- Performance class – ISO FE AH-C01-SSA1-t(RT,180°C)-ANSI2500-ISO 15848-1
- Production testing and certification available on request.
- Other specifications as per standard OS&Y, see page 5.

Fugitive Emissions “H” Series globe style needle valve

Specifications

• Tightness class A = \( \geq 1 \times 10^{-4} \text{ mg.s}^{-1}.\text{m}^{-3} \).
• Maximum cold working pressure rating 6,000 psig (414 barg).
• Temperature rating -29°C to 180°C (-20°F to 356°F).
• ISO15848-1 prototype tested using global helium vacuum method.
• Performance class – ISO FE AH-C01-SSA1-t(RT,180°C)-ANSI2500-ISO 15848-1
• Production testing and certification available on request.
• Other specifications as per standard needle valve, see page 6.

⚠️ When selecting products for specific applications users should refer to our notice at the bottom of page 27.
