

SmogHog® Running CLEAN Since 1975 – the SAME units

Situation

Air Solutions, Inc. was contacted by a SmogHog owner who was experiencing trouble with their unit. The CFM had dropped from 2,000 CFM to only 50 CFM. The customer needed to replace a few minor components. Should be an easy fix. Then the owner provided the original SmogHog quote and the owner's manual, from 1974/1975!

Since 1998 Air Solutions, Inc. has been providing air quality solutions, and their focus is on dust collection, industrial ventilation, vacuum systems, and components. They provide the highest quality equipment, system layout assistance, replacement parts, and field expertise and while they are manufacturer representatives they think of themselves more as problem solvers! This was demonstrated with this customers' situation.

Solution

Air Solutions worked with the customer's maintenance crew to confirm part numbers and measurements, 45 years is a long time and we wanted to get it right the first time. Parker Hannifin provided immediate support matching back part numbers to ensure the correct components were available. Air Solutions strives to provide knowledgeable and helpful design assistance and provide timely customer service.

Together we continue to focus our efforts on providing the right solution for our customers. Our application engineers are experts and have many technologies to apply to various mist, smoke, and fume challenges. Our portfolio is not only broad, it stands the test of time.

Results

Air Solutions quoted the components and once they were installed the units went back to operating at 2,000 CFM – the original design airflow from 45 years ago. The customer should be set for another 45 years. The customer thanked Air Solutions, Inc. for their quick help and then ordered replacement filters for the next change out.

SmogHog is a high-quality, reliable brand that customers trust. Once a SmogHog owner, always a SmogHog owner.
