Connection Solutions for Natural Gas
Innovative, Compliant Seal-Lok™ Technology
In response to the vital push toward sustainability, Parker has become a leader in the design and manufacture of products that utilize compressed natural gas (CNG) and liquid natural gas (LNG). Plentiful in North America and relatively inexpensive, natural gas produces 30 percent fewer greenhouse gas emissions than gasoline or diesel – making it an ideal alternative fuel for a diverse range of applications. However, when opting for an alternative fuel, it is imperative to use equipment tailored to the fuel’s unique attributes.

Parker Seal-Lok™ technology provides options that optimize fuel conveyance in natural gas applications. Seal-Lok for CNG and Seal-Lok Xtreme enhance the performance and reliability of O-ring face seal SAE J1453 connections. Available in tube and hose sizes from ¼” to ¾” (6 mm to 20 mm), both options improve connections by:

- Producing zero clearance for easy plumbing
- Utilizing existing captive O-ring groove for seal retention to prevent fallout during shipment and assembly
- Offering unlimited reusability
- Reducing assembly/disassembly times

Seal-Lok™ for CNG Applications

Parker Seal-Lok for CNG applications utilizes an elastomeric seal compound that is specially designed to address the needs of the natural gas market. The CNG compound is a hydrogenated nitrile which improves ozone resistance and supports wider temperature range requirements making it the ideal compound for CNG applications.

Key features and advantages of Seal-Lok for CNG applications:

- Available in inch sizes ¼” – ¾” and metric sizes 6 mm – 20 mm
- Offered port options: SAE J1926-1/ISO 6149-1 straight thread ports and NPT tapered ports
- Standard materials are stainless steel, steel and XTR (zinc nickel) plated steel.
- CNG compound with sealing temperature capabilities: -40° to 300°F (-40° to 149°C)
- Recommended for: low-temperature, petroleum-based hydraulics oil, ozone, aging and weather resistance
- Seal-Lok for CNG exceeds the pressure requirements of the certifications below. Please contact the division for the specific pressure ratings.

Seal-Lok for CNG applications has been tested and certified by TUV according to the following standards:

- ECE R110 regulation (Economic Commission for Europe)
- ANSI NGV 3.1-2012/CSA 12.3-2012 (Natural Gas Vehicles/Canadian Standards Association)
- ISO 15500
Seal-Lok Xtreme for Severe Temperature Applications

Extreme temperatures and chemical compatibility concerns can pose challenges to elastomeric sealings in LNG applications. Parker Seal-Lok Xtreme offers an alternative to the sealing capability of O-ring face seal SAE J1453 connections in these critical applications.

Seal-Lok Xtreme improves durability with the use of a patent-pending stainless-steel metal sealing ring. This Parker innovation achieves superior tube and hose connections at temperatures as low as -328°F (-200°C) and as high as 1200°F (650°C).

Seal-Lok Xtreme fittings are field-replaceable for easy maintenance. They enhance connections with:

- SAE/AISI 316/316L stainless-steel materials for corrosion resistance
- Working pressures up to 5,850 psi
- High resistance to overtightening or over-loosening due to vibration
- Incorporation of extreme temperature seals into O-ring face seal body design

Seal-Lok Xtreme has been extensively tested in the areas of thermal cycle and shock, as well as shown proven success in helium mass spectrometer and pressure testing. For ease of service, Seal-Lok Xtreme can be connected to tube assemblies using the existing Parker Parflange® end technology as shown.

Many applications benefit from Seal-Lok Xtreme’s rugged design, including:

- Combustion turbines
- LNG storage and fueling systems
- Cryogenic equipment
- High-temperature engine compartments
- Instrument panels

Both the Seal-Lok for CNG and Seal-Lok Xtreme product lines offer a wide range of tube and hose connection styles to meet your needs. Configurations include straights, elbows and tees with port-end options of SAE J1926-1, ISO 6149-1 straight thread and NPT.

Parker Parflange equipment is designed to make fast, leak-free connections for Seal-Lok tube fittings without brazing or welding. Using an exclusive orbital spindle motion, Parflange produces high-quality, consistent flanges and flares. Parflange units are easy to operate. With multiple power options and a simple tooling change for flanges and flares, Parflange saves you time and money on tube assembly. Parker offers a full range of Parflange equipment options:

- PRO 50
- ECO 25
- 1025

Call 614.279.7070 or visit www.parker.com to learn more about how Seal-Lok technology can enhance your application.
Your complete source for quality tube fittings, hose 
& hose fittings, brass & 
composite fittings, quick-
disconnect couplings, valves 
and assembly tools, locally 
available from a worldwide 
network of authorized 
distributors.

Fittings:
Available in inch and metric 
sizes covering SAE, BSP, 
DIN, GAZ, JIS and ISO thread 
configurations, manufactured 
from steel, stainless steel, 
brass, aluminum, nylon and 
thermoplastic.

Hose, Tubing and Bundles:
Available in a wide variety of 
sizes and materials including 
rubber, wire-reinforced, 
thermoplastic, hybrid and 
custom compounds.

Worldwide Availability:
Parker operates Fluid 
Connectors manufacturing 
locations and sales offices 
throughout North America, 
South America, Europe and 
Asia-Pacific.
