Directional Control Valves
Catalog HY14-1610/US
Series A4D01 (C Design)

Extensive Hydraulic Product Offering

Accumulators
Piston, bladder and diaphragm type accumulators, gas bottles and KleenVent reservoir isolators.
www.parker.com/accumulator

Compact Hydraulics
Self-contained with a motor, gear pump, reservoir, internal valve, load hold checks and relief valves.
www.parker.com/mtbtyne

Cylinders
Standard and custom hydraulic cylinders for industrial and mobile applications.
www.parker.com/hydcyl

Electronics/Remote Controls
Parker’s unique IQAN approach combines sturdy, well-tested hardware with intelligent, flexible computing power.
www.parker.com/isp

Filtration
Pressure and return line filters enhances machine life, reduces maintenance and lowers costs.
www.parker.com/hydraulicfilter

Integrated Hydraulic Circuits
Solutions for complex circuits that include threaded cartridge valves integrated into a single manifold.

Motors
Full line of high and low speed motors provides power up to 15,000 in-lbs of torque.
www.parker.com/pumpmotor

Power Take Off
Parker Chelsea leads the industry for engineering, innovation and performance in auxiliary power systems.
www.parker.com/chelsea

Power Units
The most complete line of standard, pre-engineered, cataloged hydraulic power units in the industry.
www.parker.com/pumpmotor

Pumps
Broad line of energy-efficient hydraulic pumps that includes piston, vane and gear pumps.
www.parker.com/mopump

Rotary Actuator
Industry leader in the design and manufacture of hydraulic rack and pinion, and vane style rotary actuators.
www.parker.com/actuator

Valves and Controls
Hydraulic valves for virtually every hydraulic equipment application, from simple to precise control.

WARNING – USER RESPONSIBILITY
Failure or improper selection or improper use of the products described herein or related items can cause death, personal injury and property damage. This document and other information from Parker-Hannifin Corporation, its subsidiaries and authorized distributors provide product or system options for further investigation by users having technical expertise.

The user, through its own analysis and testing, is solely responsible for making the final selection of the system and components and assuring that all performance, endurance, maintenance, safety and warning requirements of the application are met. The user must analyze all aspects of the application, follow applicable industry standards, and follow the information contained in the current product catalog and in any other materials provided from Parker or its subsidiaries or authorized distributors.

To the extent that Parker or its subsidiaries or authorized distributors provide component or system options based upon data or specifications provided by the user, the user is responsible for determining that such data and specifications are suitable and sufficient for all applications and reasonably foreseeable uses of the components or systems.

OFFER OF SALE
The items described in this document are hereby offered for sale by Parker-Hannifin Corporation, its subsidiaries or its authorized distributors. This offer and its acceptance are governed by the procedures stated in the detailed “Offer of Sale” elsewhere in this document or available at www.parker.com/hydraulicvalve.

SAFETY GUIDE
For safety information, see Safety Guide SG HY14-1000 at www.parker.com/safety or call 1-800-CParker.

Application

Series A4D01 hydraulic directional control valves are high performance, direct operated 4-way valves. They are available in 2 or 3-position styles. They are manifold mounted valves, which conform to NFPA’s D03, CETOP 3 mounting pattern. These valves were designed for industrial and mobile hydraulic applications which require high cycle rates, long life and high efficiency.

Features

- Easy access mounting bolts
- 259 Bar (3750 PSI) pressure rating
- Flows to 20 GPM depending on spool
- Rugged four land spools
- Low pressure drop
- Phosphate finished body
- CSA approved

A4D01 Solenoid Operated Plug-In Conduit Box Style

- Easy access mounting bolts
- Waterproof NEMA 4, IP67
- No tools required for coil removal
- 13 standard spool styles available
- Four electrical connection options
- Lights included (CSA approval for DC solenoids and lights)
- Easy coil replacement
- Plug-In design offered with lights & other options

A4D01 Solenoid Operated Hirschmann (DIN) Style

- DIN Style (43650) Hirschmann
- 13 spool styles available
- No tools required for coil removal
- Easy coil replacement
Operation
Series A4D01 directional control valves consist of a 4-chamber style body, and a case hardened sliding spool. The spool is directly shifted by a variety of operators.

Electrical Connections
Series A4D01 valves may be configured in all popular electrical configurations including:
- Plug-in Conduit Box
- Explosion Proof
- Hirschmann (DIN)
- Wire Lead Conduit Box

A4D01 Solenoid Operated Wire Lead Conduit Box Style
- Easy access mounting bolts
- Waterproof NEMA 4, IP67
- No tools required for coil removal
- 13 spool styles available
- No lights available

A4D01 DC Solenoid Operated Soft Shift
- 1 standard orifice size available
- 13 spool styles available

Technical Information

Series A4D01 (C Design)

Plugs and Connectors

Manaplug – Electrical Mini Plug
- EP336-30 3 Pin Plug
- EP316-30 5 Pin Plug (Double Solenoid)
- EP31A-30 5 Pin Plug (Single Solenoid)

Electrical Cords – Mini Plug
- EC 3 Conductor, 6 ft.
- EC3 3 Conductor, 3 ft.
- EC12 3 Conductor, 12 ft.
- EC5 5 Conductor, 6 ft.
- EC53 5 Conductor, 3 ft.
- EC512 5 Conductor, 12 ft.

Hirschmann – Female Connector
- 692915 Gray (Solenoid A)
- 692914 Black (Solenoid B)

Hirschmann – Female Connector-Rectified (48-240 VAC)
- 1301053 Gray (Solenoid A)
- 1301054 Black (Solenoid B)

Hirschmann – Female Connector-Rectified w/Lights (100-240 VAC)
- 1300712

Hirschmann – Female Connector w/Lights (Note Voltages)
- 694935 6-48 VAC or VDC
- 694936 48-120 VDC, 100-240 VAC

Performance Curves

A4D01 Shift Limits, DC 30 Watt

Example:
Determine the maximum allowable flow of a Series A4D01 valve (#65 spool) at 138 Bar (2000 PSI) supply pressure. Locate the curve marked “65”. At 138 Bar (2000 PSI) supply pressure, the maximum flow is 46 LPM (12-1/4 GPM). At 207 Bar (3000 PSI), the flow is 43-1/2 LPM (11-1/2 GPM).

Important Notes for Switching Limit Charts
1. Shift limits charted for equal flow A and B ports. Unequal A and B port flows may reduce shift limits.
2. These charts do not show explosion proof performance. Consult factory for explosion proof duty.
3. Blocking A or B ports will reduce flow by 70%.
A4D01 Shift Limits, DC 30 Watt

Example:
Determine the maximum allowable flow of a Series A4D01 valve (#07 spool) at 83 Bar (1200 PSI) supply pressure. Locate the curve marked “07”. At 83 Bar (1200 PSI) supply pressure, the maximum flow is 50 LPM (13-1/4 GPM). At 207 Bar (3000 PSI), the flow is 50 LPM (13-1/4 GPM).

Important Notes for Switching Limit Charts
1. Shift limits charted for equal flow A and B ports. Unequal A and B port flows may reduce shift limits.
2. These charts do not show explosion proof performance. Consult factory for explosion proof duty.
3. Blocking A or B ports will reduce flow by 70%.
Example:

Determine the maximum allowable flow of a Series A4D01 valve (#51 spool) at 83 Bar (1200 PSI) supply pressure. Locate the curve marked “51***”. At 83 Bar (1200 PSI) supply pressure, the maximum flow is 69 LPM (18-1/4 GPM). At 138 Bar (2000 PSI), the flow is 69 LPM (18-1/4 GPM).

Important Notes for Switching Limit Charts
1. Shift limits charted for equal flow A and B ports. Unequal A and B port flows may reduce shift limits.
2. These charts do not show explosion proof performance. Consult factory for explosion proof duty.
3. Blocking A or B ports will reduce flow by 70%.
Example:
Determine the maximum allowable flow of a Series A4D01 valve (#07 spool) at 83 Bar (1200 PSI) supply pressure. Locate the curve marked “07”. At 83 Bar (1200 PSI) supply pressure, the maximum flow is 75 LPM (20 GPM). At 207 Bar (3000 PSI), the flow is 68 LPM (18 GPM).

**Important Notes for Switching Limit Charts**
1. Shift limits charted for equal flow A and B ports. Unequal A and B port flows may reduce shift limits.
2. These charts do not show explosion proof performance. Consult factory for explosion proof duty.
3. Blocking A or B ports will reduce flow by 70%.

**Soft Shift Limit Curves**
Pressure Drop vs. Flow, High Watt

The table to the right provides the flow vs. pressure drop curve reference for standard and high performance A4D01 Series valves by spool type. The chart below demonstrates graphically the pressure drop characteristics of the standard A4D01 and the high performance A4D01.

</tr>
</tbody>
</table>

Curves were generated using 100 SSU hydraulic oil. For any other viscosity, pressure drop will change per chart. Pressure drops charted for equal flow A and B ports. Unequal A and B port flows may decrease shift limits.

### Performance Curves – 30 Watt Coil

![Pressure Drop vs. Flow Curve](image-url)
General Description
Series A4D01 directional control valves are high performance, 4-chamber, direct operated, wet armature solenoid controlled, 3 or 4-way valves. They are available in 2 or 3-position and conform to NFPA’s D03, CETOP 3 mounting patterns.

Features
- Soft shift available.
- 13 standard spool styles available (for other spools – Consult Factory).
- Four electrical connection options.
- AC & DC lights available (CSA approval for solenoids and lights).
- Internally ground.
- Easy access mounting bolts.
- Waterproof (meets NEMA 4, up to IP67 on some models).
- Explosion proof.
- All valves are CSA certified.
- No tools required for coil removal.

AC Leadwire Conduit Box Connector, without Lights, Single Solenoid

Note: 22.0 mm (0.87") from bottom of bolt hole counterbore to bottom of valve.
AC Plug-in or Leadwire Conduit Box Connector, with or without Lights, Double Solenoid

Light (Plug-in Only)

DC Plug-in or Leadwire Conduit Box Connector, with or without Lights and Extended Override Tubes, Double Solenoid

Note: 22.0 mm (0.87") from bottom of bolt hole counterbore to bottom of valve.
Explosion Proof U.L. & C.S.A., Double Solenoid

Note: 22.0 mm (0.87") from bottom of bolt hole counterbore to bottom of valve.

Accessories

**Manaplug (Option 62)**
- Brad Harrison Plug
- 3-Pin for Single Solenoid
- 5-Pin for Double Solenoid

**Conduit Box (Option 28)**
- No Wiring Options Available

**Signal Lights (Option 61) — Plug-in Only**
- LED Interface
- Meets Nema 4/IP67

**3-Pin Manaplug (Mini) with Lights**
Single Solenoid Valves — Installed Opposite Side of Solenoid

3-Pin Manaplug (Mini) with Lights
Single Solenoid Valves — Installed Opposite Side of Solenoid

5-Pin Manaplug (Mini) with Lights
Single Solenoid Valves — Installed Opposite Side of Solenoid
Double Solenoid Valves — Installed Over “A” Solenoid
(“A” and “B” Solenoids Reversed for #07 Spool)

Pins are as seen on valve
(male pin connectors).

Sandwich Valve Dimensional Data

All D03 stack valves including ZRE, ZRD, ZDR, ZDV-P01, ZDV-A01, and ZDV-B01 measure 40mm (1.58") thickness.

For additional technical information about stack valves, refer to the Stack Valve Section.
**Fluid Recommendations**

Premium quality hydraulic oil with a viscosity range between 32-54 cst. (150-250 SSU) at 38°C (100°F) is recommended. The absolute operation viscosity range is from 16-220 cst. (80-1000 SSU). Oil should have maximum anti-wear properties and rust and oxidation treatments.

**Fluids and Seals**

Valves using synthetic, fire-resistant fluids require special seals. When phosphate ester or its blends are used, FLUOROCARBON seals are required. Water-glycol, (95/5) water-in-oil emulsions, and petroleum oil may be used with NITRILE seals.

**Temperature Recommendation**

Recommended oil temperature:
-29°C to +71°C (-20°F to +160°F)

Ambient temperature:
AC High Watt ambient temperature cannot exceed 60°C (140°F).
DC High Watt ambient temperature cannot exceed 71°C (160°F).

**Filtration**

For maximum valve and system component life, the system should be protected at a contamination level not to exceed 125 particles greater than 10 microns per milliliter of fluid. (SAE Class 4 or better, ISO Code 16/13).

**Tank Line Surges**

If several valves are piped with a common tank line, flow surges in the line may cause unexpected spool shift. Detent style valves are most susceptible to this. Separate tank lines should be used when line surges are expected in an application.

**Recommended Mounting Position**

<table>
<thead>
<tr>
<th>Valve Type</th>
<th>Recommended Mounting Position</th>
</tr>
</thead>
<tbody>
<tr>
<td>Detent (Solenoid)</td>
<td>Horizontal</td>
</tr>
<tr>
<td>Spring Centered</td>
<td>Unrestricted</td>
</tr>
<tr>
<td>Spring Offset</td>
<td>Unrestricted</td>
</tr>
</tbody>
</table>

**Sitting**

Sitting can cause any sliding spool valve to stick and not spring return, if held shifted under pressure for long periods of time. The valve should be cycled periodically to prevent sticking.

**Flow Path Data**

*Note: On valve with 07 spool, A and/or B operators reverse sides. Flow paths remain the same as viewed from top of valve.*

**Single Pass Operation**

Valve flow ratings are for double pass operation (with equal flow in both paths). When using these components in single pass applications, flow capabilities may be reduced. Consult your local Parker representative for details.

**Double Solenoid.** With solenoid “A” energized, flow path is P→A and B→T. When solenoid “B” is energized, flow path is P→B and A→T. The center condition on a spring-centered valve exists when both coils are de-energized, or during a complete shift, as the spool passes through center.

**Detent and Spring Offset.** The center condition exists on detent and spring offset valves only during spool crossover. To shift and hold a detented spool, only a momentary energizing of the solenoid is necessary. The minimum duration of the signal is approximately 0.1 seconds for DC voltages. This position will be held provided the spool center line is in a horizontal plane, and no shock or vibration is present to displace the spool.

**Single Solenoid.** Spring offset valves can be ordered in styles 01, 02, 05 and 06. Flow path data for the various styles are described in the order chart.

**Electrical Failure**

Should electric power fail, spring offset and spring centered valves will shift to the spring held position. Detented valves will stay in the last position held before power failure. If main flow does not fail or stop simultaneously, machine actuators may continue to function in an undesirable manner or sequence.

**Torque Specifications**

Torque values recommended for the bolts which mount the valve to the manifold or subplate are as follows:
#10-24 thread (M5-0.8) torque 5.6 Nm (50 in-lbs).
Offer of Sale

The items described in this document and other documents or descriptions provided by Parker Hannifin Corporation, its subsidiaries and its authorized distributors are hereby offered for sale at prices to be established by Parker Hannifin Corporation, its subsidiaries and its authorized distributors. This offer and its acceptance by any customer ("Buyer") shall be governed by all of the following Terms and Conditions. Buyer's offer for any such item when communicated to Parker Hannifin Corporation, its subsidiary or an authorized distributor ("Seller") verbally or in writing, shall constitute acceptance of this offer.

1. Terms and Conditions of Sale: All descriptions, quotations, proposals, offers, acknowledgments, acceptances and sales of Seller's products are subject to and shall be governed exclusively by the terms and conditions stated herein. Buyer's acceptance of any offer to sell is limited to these terms and conditions. Any terms or conditions in addition to, or inconsistent with those stated herein, proposed by Buyer in any acceptance of an offer by Seller, are hereby objected to. No such additional, different or inconsistent terms and conditions shall become part of the contract between Buyer and Seller unless expressly accepted in writing by Seller. Seller's acceptance of any offer to purchase by Buyer is expressly conditional upon Buyer's assent to all the terms and conditions stated herein, including any terms in addition to, or inconsistent with those contained in Buyer's offer. Acceptance of Seller's products shall in all events constitute such assent.

2. Payment: Payment shall be made by Buyer net 30 days from the date of delivery of the items purchased hereunder. Amounts not timely paid shall bear interest at the maximum rate permitted by law for each month or portion thereof that the Buyer is late in making payment. Any claims by Buyer for reductions or shortages in a shipment shall be void unless Buyer receives notice thereof within 30 days after Buyer's receipt of the shipment.

3. Delivery: Unless otherwise provided on the face hereof, delivery shall be made F.O.B. Seller's plant. Regardless of the method of delivery, however, risk of loss shall pass to Buyer upon Seller's delivery to a carrier. Any delivery dates shown are approximate only and Seller shall have no liability for any delays in delivery.

4. Warranty: Seller warrants that the items sold hereunder shall be free from defects in material or workmanship for a period of 18 months from date of shipment from Parker Hannifin Corporation. THIS WARRANTY COMPRESSES THE SOLE AND ENTIRE WARRANTY PERTAINING TO ITEMS PROVIDED HEREUNDER. SELLER MAKES NO OTHER WARRANTY, GUARANTEE, OR REPRESENTATION OF ANY KIND WHATSOEVER. ALL OTHER WARRANTIES, INCLUDING BUT NOT LIMITED TO, MERCHANTABILITY AND FITNESS FOR PURPOSE, WHETHER EXPRESS, IMPLIED, OR ARISING BY OPERATION OF LAW, TRADE USAGE, OR COURSE OF DEALING ARE HEREBY DISCLAIMED. NOTWITHSTANDING THE FOREGOING, THERE ARE NO WARRANTIES WHATSOEVER ON ITEMS BUILT OR ACQUIRED WHOLLY OR PARTIALLY, TO BUYER'S DESIGNS OR SPECIFICATIONS.

5. Limitation of Remedy: SELLER'S LIABILITY ARISING FROM OR IN ANY WAY CONNECTED WITH THE ITEMS SOLD OR THIS CONTRACT SHALL BE LIMITED EXCLUSIVELY TO REPAIR OR REPLACEMENT OF THE ITEMS SOLD OR REFUND OF THE PURCHASE PRICE PAID BY BUYER, AT SELLER'S SOLE OPTION. IN NO EVENT SHALL SELLER BE LIABLE FOR ANY INCIDENTAL, CONSEQUENTIAL OR SPECIAL DAMAGES OF ANY KIND OR NATURE WHATSOEVER, INCLUDING BUT NOT LIMITED TO LOST PROFITS ARISING FROM OR IN ANY WAY CONNECTED WITH THIS AGREEMENT OR ITEMS SOLD HEREUNDER, WHETHER ALLEGED TO ARISE FROM BREACH OF CONTRACT, EXPRESS OR IMPLIED WARRANTY, OR IN TORT, INCLUDING WITHOUT LIMITATION, NEGLIGENCE, FAILURE TO WARN OR STRICT LIABILITY.

6. Changes, Reschedulings and Cancellations: Buyer may request to modify the designs or specifications for the items sold hereunder as well as the quantities and delivery dates thereof, or may request to cancel all or part of this order, however, no such requested modification or cancelation shall become part of the contract between Buyer and Seller unless accepted by Seller in a written amendment to this Agreement. Acceptance of any such requested modification or cancellation shall be at Seller's discretion, and shall be upon such terms and conditions as Seller may require.

7. Special Tools: A tooling charge may be imposed for any special tooling, including without limitation, dies, fixtures, molds and patterns, acquired to manufacture items sold pursuant to this contract. Such special tooling shall be and remain Seller's property notwithstanding payment of any charges paid by Buyer. Unless otherwise agreed, Seller shall have the right to alter, discard or otherwise dispose of any special tooling or other property in its sole discretion at any time.

8. Buyer's Property: Any designs, tools, patterns, materials, drawings, confidential information or equipment furnished by Buyer or any other items which become Buyer's property, may be considered obsolete and may be destroyed by Seller after two (2) consecutive years have elapsed without Buyer placing an order for the items which are manufactured using such property. Seller shall not be responsible for any loss or damage to such property while it is in Seller's possession or control.

9. Taxes: Unless otherwise indicated on the face hereof, all prices and charges are exclusive of excise, sales, use, property, occupational or like taxes which may be imposed by any taxing authority upon the manufacture, sale or delivery of the items sold hereunder. If any such taxes must be paid by Seller or if Seller is liable for the collection of such tax, the amount thereof shall be in addition to the amounts for the items sold. Buyer agrees to pay all such taxes or to reimburse Seller therefore upon receipt by Seller of said tax. Any claim by Buyer against any such tax imposed by any taxing authority, Buyer shall save Seller harmless from and against any such tax, together with any interest or penalties thereon which may be assessed if the items are held to be taxable.

10. Indemnity For Infringement of Intellectual Property Rights: Seller will defend and indemnify Buyer against allegations of infringement of U.S. Patents, U.S. Trademarks, copyrights, trade dress and trade secrets (hereinafter 'Intellectual Property Rights'). Seller will defend at its expense and will pay the cost of any settlement or damages awarded in an action brought against Buyer based on an allegation that an item sold pursuant to this contract infringes the Intellectual Property Rights of a third party. Seller's obligation to defend and indemnify Buyer is contingent on Buyer notifying Seller within ten (10) days after Buyer becomes aware of such allegations of infringement, and Seller having sole control over the defense of any allegations or actions including all negotiations for settlement or compromise. If an item sold hereunder is subject to a claim that it infringes the Intellectual Property Rights of a third party, Seller may, at its sole expense and option, procure for Buyer the right to continue using said item, replace or modify said item so as to make it noninfringing, or offer to accept return of said item and return the purchase price less a reasonable allowance for depreciation. Notwithstanding the foregoing, Seller shall have no liability for claims of infringement based on information provided by Buyer, or directed to items delivered hereunder for which the designs are specified in whole or part by Buyer, or infringements resulting from the modification, combination or use in a system of any item sold hereunder. The foregoing provisions of this Part 10 shall constitute Seller's sole and exclusive liability and Buyer's sole and exclusive remedy for infringement of Intellectual Property Rights. If a claim is based on information provided by Buyer or if the design for an item delivered hereunder is specified in whole or in part by Buyer, Buyer shall defend and indemnify Seller for all costs, expenses or judgments resulting from any claim that such item infringes any patent, trademark, copyright, trade dress, trade secret or any similar right.

11. Force Majeure: Seller does not assume the risk of and shall not be liable for delay or failure to perform any of Seller's obligations by reason of circumstances beyond the reasonable control of Seller (hereinafter 'Events of Force Majeure'). Events of Force Majeure shall include without limitation acts of God, acts of any third party, Seller's sole and exclusive liability and Buyer's sole and exclusive remedy for infringement of Intellectual Property Rights. If any design, tool, pattern, material, drawing, information or equipment furnished by Buyer is subject to a claim that it infringes the Intellectual Property Rights of a third party, Buyer shall defend and indemnify Seller for all costs, expenses or judgments resulting from any claim that such item infringes any patent, trademark, copyright, trade dress, trade secret or any similar right.

12. Entire Agreement/Governing Law: The terms and conditions set forth herein, together with any amendments, modifications and any different terms or conditions expressly accepted by Seller in writing, shall constitute the entire Agreement concerning the items sold, and there are no oral or other representations or agreements which pertain thereto. This Agreement shall be governed in all respects by the law of the State of Ohio. No actions arising out of the sale of the items sold hereunder or this Agreement may be brought by either party more than two (2) years after the cause of action accrues.
WARNING: Failure or improper selection or improper use of Parker Hydraulic Valve Division (HVD) Valves or related accessories (“Products”) can cause death, personal injury and property damage. Possible consequences of failure or improper use of these Products include but are not limited to:

- Valves or parts thereof thrown off at high speed
- High velocity fluid discharge
- Explosion or burning of the conveyed fluid
- Contact with suddenly moving or falling objects controlled by the Valve
- Injections by high-pressure fluid discharge
- Contact with fluid that may be hot, cold, toxic or otherwise injurious
- Injuries resulting from injection, inhalation or exposure to fluids
- Injury from handling a heavy item (dropped, awkward lift)
- Electric shock from improper handling of solenoid connections
- Injury from slip or fall on splashed or leaked fluid

Before selecting or using any of these Products, it is important that you read and follow the instructions below. In general, the Products are not approved for in-flight aerospace applications. Consult the factory for the few that are FAA approved.

1.0 GENERAL INSTRUCTIONS

1.1 Scope: This safety guide provides instructions for selecting and using (including assembling, installing and maintaining) these Products. For convenience all items in this guide are called “Valves”. This safety guide is a supplement to and is to be used in conjunction with the specific Parker catalogs for the specific Valves and/or accessories being considered for use. See item 1.6 below for obtaining those catalogs.

1.2 Fail-Safe: Valves can and do fail without warning for many reasons. Design all systems and equipment in a fail-safe mode, so that failure of the Valve or Valve Assembly will not endanger persons or property.

1.3 Safety Devices: Never disconnect, override, circumvent or otherwise disable any safety lockout on any system whether powered by HVD Valves or any motion control system of any manufacturer. (e.g., Automatic shut-off on a riding lawn mower should the operator get out of the seat).

1.4 Distribution: Provide a copy of this safety guide to each person that is responsible for selecting or using HVD Valve Products. Do not select HVD Valves without thoroughly reading and understanding this safety guide as well as the specific Parker catalogs for the Products considered or selected.

1.5 User Responsibility: Due the wide variety of operating conditions and applications for Valves, HVD and its distributors do not represent or warrant that any particular Valve is suitable for any specific system. This safety guide does not analyze all technical parameters that must be considered in selecting a product. The user, through its own analysis and testing is solely responsible for:

- Making the final selection of the Valve
- Assuring that the user’s requirements are met and that the application presents no health or safety hazards.
- Providing all appropriate health and safety warnings on the equipment on which the Valves are used.
- Assuring compliance with all applicable government and industry standards.

1.6 Additional Questions: Call the appropriate Parker technical service department if you have any questions or require any additional information. See the Parker publication for the product being considered or used, or call 1-800-CPARKER, or go to www.parker.com, for the telephone numbers of the appropriate technical service department. For additional copies of this or any other Parker Safety Guide go to www.parker.com and click on the safety button on the opening page. Catalogs and/or catalog numbers for the various HVD Valve Products can be obtained by calling HVD at 440-366-5100. Phone numbers and catalog information is also available on the Parker website, www.parker.com.

2.0 VALVE SELECTION INSTRUCTIONS

2.1 Pressure: Valve selection must be made so that the maximum working pressure of the Valve is equal to or greater than the maximum system pressure. Surge, impulse or peak transient pressures in the system must be below the maximum working pressure of the Valve. Surge, impulse and peak pressures can usually be determined by sensitive electrical instrumentation that measures and indicates pressures at millisecond intervals. Mechanical pressure gauges indicate only average pressure and cannot be used to determine surge, impulse or peak transient pressures. Burst pressure ratings if given or known are for manufacturing purposes only and are not an indication that the Product can be used in applications at the burst pressure or otherwise above the maximum working pressure.

2.2 Temperature: The fluid temperature must be regulated or controlled so that the operating viscosity of the fluid is maintained at a level specified for the particular Valve product. Such ranges are given in product catalogs or can be obtained from the appropriate customer service department for the particular Valve product.

2.3 Fluid Compatibility: The Fluid conveyed in Valves has direct implications on the Valve selection. The fluid must be chemically compatible with the Valve component materials. Elastomer seals, brass, cast iron, aluminum for example all are potentially affected by certain fluids. Additionally, fluid selection affects the performance of various Valves. Considerations relative to fluid selection are outlined in the specific HVD Valve product catalog. Of particular importance is that the fluid be for hydraulic use, contain the proper additives and wear inhibitors. See 1.6 “Additional Questions” above for information to obtain such HVD catalogs.

2.4 Changing Fluids: If a system requires a different fluid, it should be done with the guidance in number 2.3 above. Additionally, it may be necessary to flush the system (including the Valves) to remove any of the previous fluid. Consult the Parker Valve Division for guidance.

2.5 Size: Transmission of power by means of pressurized fluid varies with pressure and rate of flow. The size of the components must be adequate to keep pressure losses to a minimum and avoid damage due to heat generation or excessive fluid velocity.

2.6 Placement: Installation of Valves must take into account the orientation of the Valve and the proximity of the Valve to other parts of the system. This includes but is not limited to closeness to hot and cold areas, access for servicing and operation as well as orientation for proper connectors.

2.7 Ports: Connection of Valves in systems can be by threaded ports, sub-base surfaces, flanges and manifolds. In all cases, the proper fitting, surface or mounting hardware must be selected to properly seal and contain the system fluid so as to avoid the adverse conditions listed in the initial warning box above. Specifically, if using threaded ports, the designer must make sure that the mating fitting is of the compatible thread. Also, the instructions provided by the connector hardware supplier must be read and understood so as to properly assemble the connector. The Parker Safety Guide for using Hose, Tubing and Fittings and Related Accessories is but one reference to this end.

2.8 Environment: Care must be taken to assure that the Valve and Valve Assemblies are either compatible with or protected from the environment (that is, surrounding conditions) to which they are exposed. Environmental conditions including but not limited to ultraviolet radiation, sunlight, heat, ozone, moisture, water, salt water, chemicals and air pollutants can cause degradation and premature failure.

2.9 Electric Power: For Valves requiring electric power for control, it is imperative that the electricity be delivered at the proper voltage, current and wattage requirements. To obtain the proper control requirements please refer to the respective Parker product catalog for the specific Valve that is intended for use. If further guidance is required, call the appropriate technical service department identified in the respective Parker product catalog.

2.10 Specifications and Standards: When selecting Valves, government, industry and Parker specifications and recommendations must be reviewed and followed as applicable.

2.11 Accessories: All accessories used in conjunction with any Parker Valve product must be rated to the same requirements of the Valve including but not limited to pressure, flow, material compatibility, power requirements. All of these items must be examined as stated in the “VALVE INSTALLATION INSTRUCTIONS” paragraph 3.0.

(continued on next page)
3.0 VALVE INSTALLATION INSTRUCTIONS

3.1 Component Inspection: Prior to use, a careful examination of the Valve(s) must be performed. The Valve intended for use must be checked for correct style, size, catalog number and external condition. The Valve must be examined for cleanliness, absence of external defects or gouges, cracked or otherwise deformed parts or missing items. The mounting surface or port connections must be protected and free of burrs, scratches, corrosion or other imperfections. Do NOT use any item that displays any signs of nonconformance. In addition, any accessory including but not limited to fittings, bolts, nuts, sub bases, manifolds, and electrical connectors must be examined to the same examination.

3.2 Handling Valves: Many Valves whether HVD Valves or of another manufacturer can be large, bulky or otherwise difficult to handle. Care must be taken to use proper lifting techniques, tools, braces, lifting belts or other aids so as not to cause injury to the user, any other person or to property.

3.3 Filtration: Fluid cleanliness is a necessity in any hydraulic system. Fluid filters must be installed and maintained in the system to provide the required level of fluid cleanliness. Filters can be placed in the inlets, pressure lines and return lines. The level of cleanliness required is specified in the HVD product catalog for the specific Valve intended for use. For initial selection contact Parker Filter Division. Contact Parker Filter Division at 800-253-1258 or 419-644-4311.

3.4 Servo Valves: Application of Servo Valves in general requires knowledge and awareness of “closed loop control theory” and the use of electronic controls for successful and safe operation. Individuals who do not have such experience or knowledge must gain training before use of such products. Parker offers both classroom training as well as manuals to assist in gaining this knowledge. These aids can be obtained by contacting Hydraulic Valve Division at 440-366-5100, calling the general Parker help line 800-CPARKER or going to the Parker web site at www.parker.com.

3.5 Accessory Ratings: All accessories used in combination with the selected or intended Valve product must be rated and compatible with the selected Valve. Specifically, the items must be of equal or greater rating including but not limited to pressure, flow, power, size, port style, thread connectors and material.

3.6 Connection Styles: It is the responsibility of the user of the Parker product to properly select connectors and accessories that match the connections on the sub plate, Valve, flange or threaded connection or manifold. It is also the responsibility of the installer to possess adequate skill and knowledge including but not limited to thread preparation, torque technique, hose assembly and inspection, tube preparation and assembly, and fitting installation. Parker Tube Fitting Division (www.parker.com/tfd) catalog 4500 and Parker Hose Products (www.parkerhose.com) catalog 4400 describe some basic technical information relative to proper fitting assembly.

3.7 Electrical Connections: All electrical connections must be made to the applicable codes and local safety requirements.

3.8 Gauges and Sensors: The user must install sufficient gauges and sensors in the system so as to be able to determine the condition of the system. This includes but is not limited to pressure gauges, flow meters, temperature sensors and site gauges. These are of utmost importance should removal or disassembly of a Valve, portion of Va Valve or portion of the system become necessary. Refer to “VALVE MAINTENANCE AND REPLACEMENT INSTRUCTIONS” for details and especially item 4.8.

3.9 System Checkout: Once installed, the Valve installation must be tested to insure proper operation and that no external leakage exists. All safety equipment must be in place including but not limited to safety glasses, helmets, ear protection, splash guards, gloves, coveralls and any shields on the equipment. All air entrapment must be eliminated and the system pressurized to the maximum system pressure (at or below the Valve maximum working pressure) and checked for proper function and freedom from leaks. Personnel must stay out of potentially hazardous areas while testing and using.

4.0 VALVE MAINTENANCE AND REPLACEMENT INSTRUCTIONS

4.1 Maintenance Program: Even with proper installation, Valves and Valve System life may be significantly reduced without a continuing maintenance program. The severity of the application and risk potential must determine the frequency of the inspection and the replacement of the Products so that Products are replaced before any failure occurs.

3.4.1 Maintenance Program: Maintenance program must be established and followed by the user and, at a minimum, must include instructions 4.2 through 4.10. An FMEA (Failure Mode and Effects Analysis) is recommended in determining maintenance requirements.

4.2 Visual Inspection-Valves: Any of the following conditions require immediate shut down and replacement of the Valve.

4.2.1 Evidence that the Valve is in partial dis-assembly.

4.2.2 Visible crack or suspicion of a crack in the Valve housing or bent, cracked or otherwise damaged solenoid.

4.2.3 Missing or partially extending drive pin on a flow control knob.

4.2.4 Missing, loose components, obstructions or other condition impeding the motion or function of the manual knob, lever, foot pedal or other mechanical operator of a hydraulic Valve.

4.2.5 Any evidence of burning or heat induced discoloration.

4.2.6 Blistered, soft, degraded or loose cover of any kind.

4.2.7 Loose wire or electrical connector.

4.3 Visual Inspection-Other: The following conditions must be tightened, repaired, corrected or replaced as required.

4.3.1 Fluid on the ground must be cleaned immediately. Also, the source of the fluid must be determined prior to running the equipment again.

4.3.2 Leaking port or excessive external dirt build-up.

4.3.3 System fluid level is too low or air is entrapped or visible in the reservoir.

4.3.4 A pump controlled by the Valve or Valve assembly has been losing power, speed, efficiency.

4.4 Filter Maintenance: System filters must be maintained and kept in proper working order. The main service requirement is periodic replacement of the filter element or screen. Contact Parker Filter Division at 800-253-1258 or 419-644-4311 for further filter maintenance details.

4.5 Functional Test: See “System Checkout” number 3.9 above in “VALVE INSTALLATION INSTRUCTIONS”.

4.6 Replacement Intervals: Valves and Valve Systems will eventually age and require replacement. Seals especially should be inspected and replaced at specific replacement intervals based on previous experience, government or industry recommendations, or when failures could result in unacceptable downtime, damage or injury risk. At a minimum seals must be replaced whenever service is rendered to a Valve product.

4.7 Adjustments, Control Knobs, and Other Manual Controls: System Pressure and Flow are typically adjusted by knobs and/or handles. A set-screw or lock-nut secures the adjustment device so as to maintain the desired setting. This set-screw or lock-nut must first be loosened prior to making any adjustments and re-tightened after adjustment on the HVD Valve. All adjustments must be made in conjunction with pressure gauges and/or flow meters (or by watching the speed of the actuator in the case of setting flow only). See paragraph “Gauges and Sensors” above in the section “VALVE INSTALLATION INSTRUCTIONS”. Under no circumstances should any control knob, adjustment stem, handle, foot pedal or other actuating device be forced beyond the mechanical stop(s) on the Valve. For example, the Parker Safety Notice Bulletin HY14-3310-B1/US for HVD Colorflow Valves specifically restricts the adjustment torque to “hand adjust” or “less than 10 ft/lbs” if it cannot be adjusted by hand. Failure to adhere to this may force the knob beyond the stop point allowing it to be ejected at high speed resulting in death, personal injury and property damage. For complete safety instructions on HVD Colorflow Valves, copies of Safety Notice Bulletin HY14-3310-B1/US can be obtained directly from the Hydraulic Valve Division at 440-366-5100 or from the Parker web site at www.parker.com by selecting the “Safety” button. Parker help line 800-CPARKER is on call 24/7 as well should there be any question about the use of a HVD Valve. Additionally, when making adjustments, always adjust the Valve with all parts of your body to the side of the Valve (that is, the knob is not pointing toward you or anyone else).

4.8 High Pressure Warning: Hydraulic power is transmitted by high-pressure fluids through hoses, fittings and valves, pumps and actuators. This condition can be dangerous and potentially lethal and, therefore, extreme caution must be exercised when working with fluids under pressure. From time to time, hoses, Valves, tubes or fittings may not be replaced at the time the Valve was manufactured due to time intervals. Typical signs of these failure are in the form of misapplication, abuse, wear, or failure to perform proper maintenance. When such failure occurs, generally the high pressure fluid inside escapes in a stream which may or may not be visible to the user. Under no circumstances should the user attempt to locate the leak by “feeling” with their hands or any other part of their body. High-pressure fluids can and will penetrate the skin and cause severe tissue damage and possible loss of limb or life. Even seemingly minor hydraulic fluid injection injuries must be treated immediately by a physician with knowledge of the tissue damaging properties of hydraulic fluid.

4.9 If a hose, tube, fitting or Valve failure occurs, immediately shut down the equipment and leave the area until pressure has been completely released from the system. Simply shutting down the pump may or may not eliminate the pressure in the system. It may take several minutes or even hours for the pressure to be relieved so that the leak area can be examined safely. Once the pressure has been reduced to zero, the suspected leaking item can be taken off the equipment and examined. It must always be replaced if a failure has occurred. Never attempt to patch or repair a connector (especially a hose) or Valve that has failed. Consult the nearest Parker distributor or the appropriate Parker division for component replacement information. Never touch or examine a failed hydraulic component unless it is obvious that the item no longer contains fluid under pressure.

Directional Control Valves
Series A4D01 (C Design)

Extensive Hydraulic Product Offering

Accumulators
Compact Hydraulics
Cylinders
Electronics/Remote Controls

Piston, bladder and diaphragm type accumulators, gas bottles and KleenVent reservoir isolators.
www.parker.com/accumulator

Self-contained with a motor, gear pump, reservoir, internal valve, load hold, and relief valves.
www.parker.com/i4d12y

Standard and custom hydraulic cylinders for industrial and mobile applications.
www.parker.com/hydcoy

Parker’s unique IQAN approach combines sturdy, well-tested hardware with intelligent, flexible computing power.
www.parker.com/eign

Filtration
Integrated Hydraulic Circuits
Motors
Power Take Off

Pressure and return line filters enhance machine life, reduce maintenance and lowers costs.
www.parker.com/hydraulicfilter

Solutions for complex circuits that include threaded cartridge valves integrated into a single manifold.
www.parker.com/hydcircuit

Full line of high and low speed motors provide power up to 15,000 in-lbs of torque.
www.parker.com/pumpmotor

Parker Chelsea leads the industry for engineering, innovation and performance in auxiliary power systems.
www.parker.com/choes

Power Units
Pumps
Rotary Actuator
Valves and Controls

The most complete line of standard, pre-engineered, cataloged hydraulic power units in the industry.
www.parker.com/pumpmotor

Broad line of energy efficient hydraulic pumps that includes piston, vane and gear pumps.
www.parker.com/mdpump

Industry leader in the design and manufacture of hydraulic rack and pinion, and vane style rotary actuators.
www.parker.com/actuator

Hydraulic valves for virtually every hydraulic equipment application, from simple to precise control.
www.parker.com/hydraulicvalve

Covering the Industrial, Mobile and Truck markets, each catalog is paired with an interactive CD. Call for your comprehensive guide.

WARNING – USER RESPONSIBILITY

Failure or improper selection or improper use of the products described herein or related items can cause death, personal injury and property damage.

This document and other information from Parker-Hannifin Corporation, its subsidiaries and authorized distributors provide product or system options for further investigation by users having technical expertise.

The user, through its own analysis and testing, is solely responsible for selecting the system and components and assuring that all performance, endurance, safety and warning requirements of the application are met. The user must analyze all aspects of the application, follow applicable industry standards, and follow the information concerning the products in the current product catalog and any other material provided from Parker or its subsidiaries or authorized distributors.

To the extent that Parker or its subsidiaries or authorized distributors provide component or system options based upon data or specifications provided by the user, the user is responsible for determining that such data and specifications are suitable and sufficient for all applications and reasonably foreseeable uses of the components or systems.
